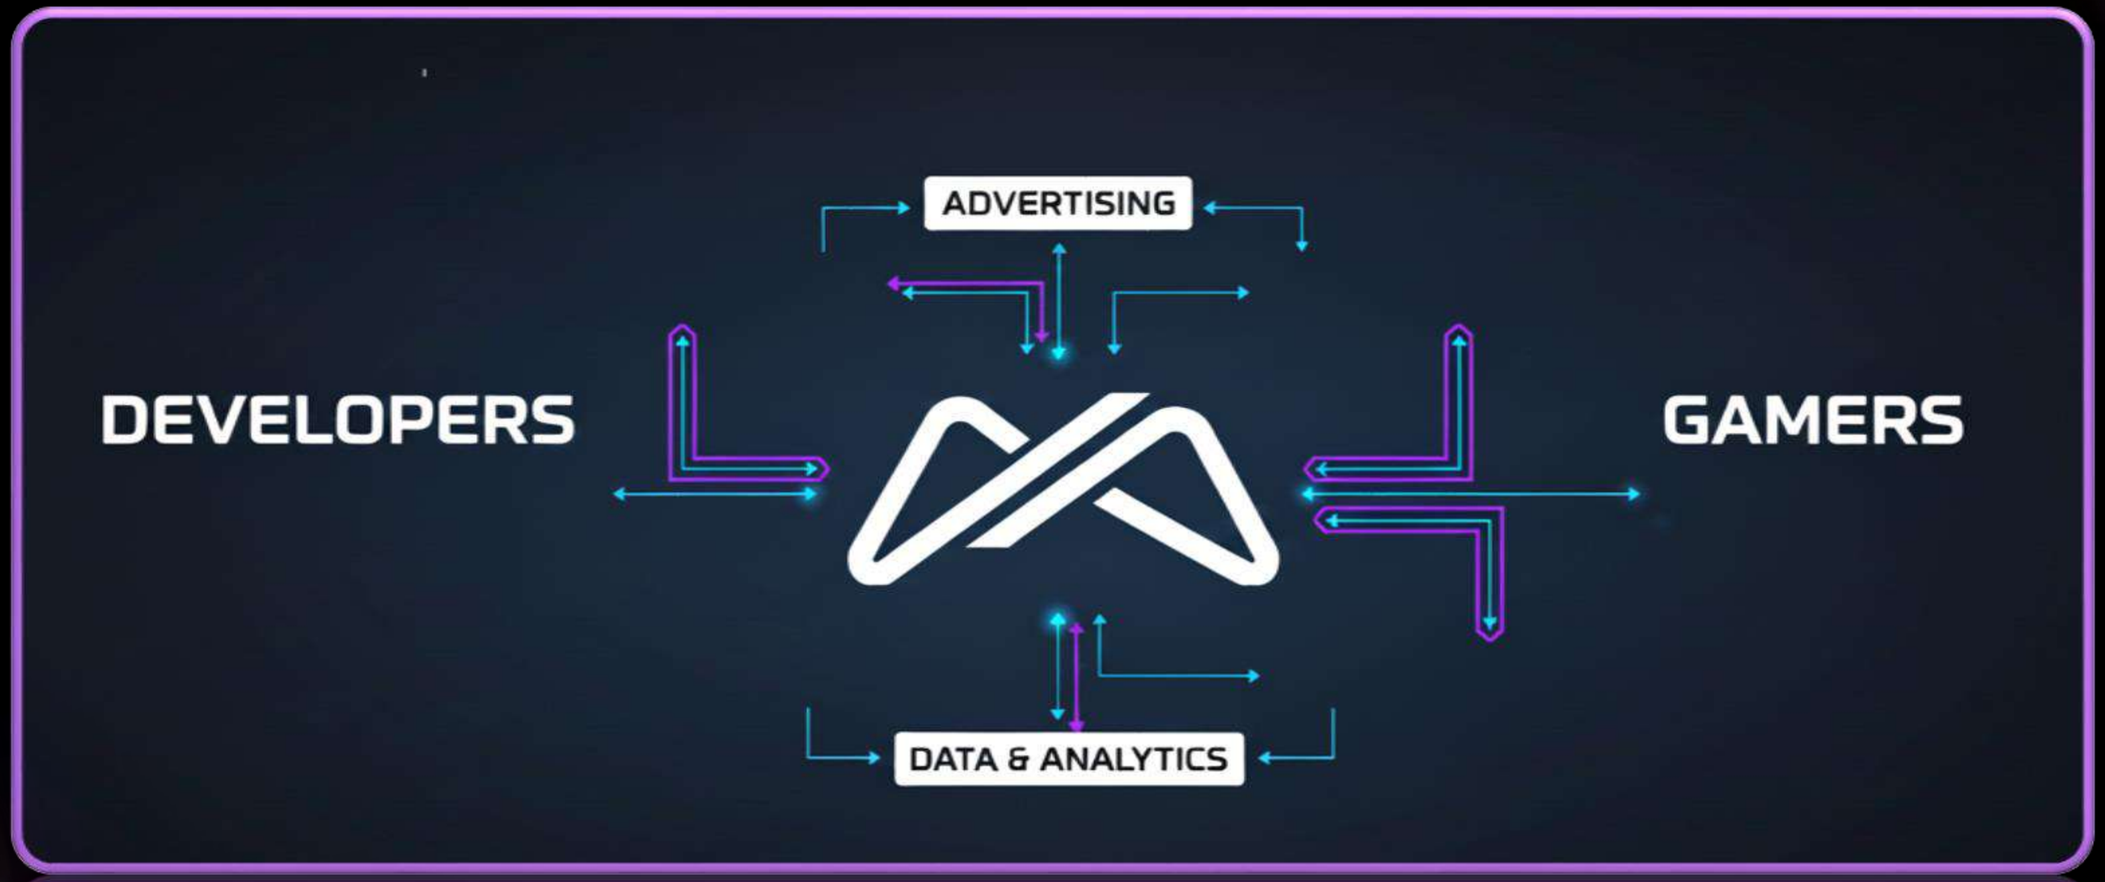
dream peasy

A world where your skills unlock new opportunities

PITCH DECK

Platform overview



Vision

A world where gamers can invest and monetize thanks to their own skills

---

Mission

To connect gamers and developers through a powerful platform that turns skill and creativity into real opportunities

---

Purpose

To generate real value for gamers and developers who follow their passions

Market opportunity – TAM – SAM – SOM

TAM – Total Addressable Market

$40B in 2024
$100B+ by 2032

SAM - Serviceable Available Market

$22.1B in 2024
$81.6B by 2035

SOM - Serviceable Obtainable Market

14M gamers in Italy
Skill-based target (5%): 700,000
Potential registered users (20%): 140,000
Paying users (5–10%): 7,000–14,000 per month
Italy SOM = 7,000–14,000 paying users/month

Dreampeasy penetrates a $100B global market, operates in a $22B segment, and can realistically capture 7–14k paying users in Italy in the first year

PESTEL Analysis

Political

Governments are tightening rules on loot boxes and gambling, creating an opening for regulated, skill-based platforms that are explicitly "not gambling"

Technological

Advanced Anti-Cheat and SDKs allow for scalable, automated trust without high overhead.

Economic

Explosive demand from gamers to monetize their time. Indie developers urgently need alternatives to broken App Store models.

Environmental

Purely digital model with no physical manufacturing or logistics footprint

Social

Players are frustrated by "Pay-to-Win" and RNG mechanics, demand fair, meritocratic competition. Consumption habits favor short, micro-challenge formats (20–60s).

Legal

The business model thrives on the clear legal distinction between "games of skill" and "games of chance”. Compliance barriers (ADM, KYC) protect us from low-quality entrants.

Five forces model

Threat of New Entrants

Medium–High: easy to create games, hard to match regulation, payments, anti-cheat.

Threat of Substitutes

High: mobile games, esports, betting apps offer similar excitement.

Bargaining Power of Buyers

High: gamers switch app instantly if UX or fairness is weak.

Bargaining Power of Suppliers

Medium: developers, payment providers, app stores hold power.

Industry Rivalry

Low-medium: Many skill-based platforms (Skillz, Triumph Arcade, Eaze games, Gamersaloon) competing on rewards, UX, fairness.

Competitors

PLATFORMS	COUNTRY HQ	USERS	REVENUE 2023	REVENUE 2024	POSITION
SKILLZ	USA	1M+	150,1M $	95,5M $	Leader in mobile skill-games
TRIUMPH	USA	N.A.	N.A.	N.A.	New platform/ real-money tournaments SDK (US-first)
EAZE GAMES	NL	4M+	≈3,1M $ (extimated)	$3M (extimated)	#1 real money skill gaming in Europe/ casual games
GAMERSALOON	USA	1M+	N.A.	N.A.	Pioneer of cash tournaments for console and PC since 2006

Vision

RESOURCE ...

Mission

To connect gamers and developers through a powerful platform that turns skill and creativity into real opportunities

Purpose

To generate real value for gamers and developers who follow their passions

SWOT Analysis

STRENGHS

- Retention Strategy: Corporate rewards expertise drives high engagement and LTV.
- Technical Oversight: Programming literacy ensures effective management of external development.
- Agile Operations: Startup background ensures financial discipline and rapid adaptability.
- Commercial Focus: Unified business background guarantees a revenue-first, market-driven strategy.
- Proprietary Mechanics: Unique 20–60s micro-challenges differentiate us from generic aggregators.
- Network Effects: Multi-sided model creates compounding value for both gamers and developers.

WEAKNESSES

- Critical Tech Gap (No CTO): Lacking a full-stack developer co-founder means the MVP must be outsourced or requires early hiring. This increases the initial burn rate and reliance on third parties.
- Compliance Gap: No internal Legal Officer to navigate complex ADM/AML regulations.
- The "Cold Start": No initial player liquidity; dependent on successfully persuading the first 10–15 developers to join an unproven platform

OPPORTUNITIES

- Explosive Market Growth: Riding the wave of mobile gaming, eSports, and the normalization of microtransaction culture.
- Monetization Demand: High demand from casual players (side-hustle) and indie developers needing better revenue models.
- New Revenue Streams: Potential to monetize through gamified ad formats and selling aggregated analytics to brands.
- EU Blue Ocean: Significant gap in the market with very few European players specialized in regulated skill-based gaming.

THREATS

- Global Competitors: Giants like Skillz or MPL could replicate the model and enter the European market.
- Regulatory Burden: Strict requirements create high operational costs and constraints.
- Trend Volatility: Rapidly shifting gaming trends require constant platform updates to stay relevant.
- Reputation Risk: Danger of the brand being misunderstood as "gambling," leading to social stigma.
- Catalog Saturation: Risk that competition among developers creates an oversaturated catalog, hurting discovery.

Strategy Palette

HIGH UNPREDICTABILITY

Gaming trends shift every 3-6 months, ADM regulation change unpredictably

MEDIUM-HIGH HARSHNESS

Regulation and foreign competitors with large capital

HIGH MALLEABILITY

Dreampeasy is creating a new segment and can shape rules, community and ecosystem dynamics

Strategy Palette

THE ORCHESTRATOR

Dreampeasy builds and orchestrates a new ecosystem of gamers, developers and sponsors.

Why not classical

Market is not stable or predictable

Why not adaptive

Dreampeasy does not merely react, it can influence the market

Why not visionary

Visionary strategy requires high predictability, which the gaming industry lacks

Empathy Map - Gamers

Thinks and feel

They want to monetize their gaming skills and seek fairness
They feel the "pain" of feeling scammed by RNG and want the adrenaline of fair competition. They desire a sense of control and meritocracy.

Hear?

They hear about the explosive growth of eSports and competitive gaming.
They hear about the frustration of RNG (random number generation) deciding outcomes

See?

They see "pay-to-win" mechanics in other games.
They see a lack of existing platforms that allow legal, instant-value competitions.

Say and do?

They look to fill "dead time" with adrenaline-filled activities.
They pay small buy-ins to compete.
They seek bragging rights and recognition

Pain

Pay-to-win mechanics, RNG/luck factors, and no financial return on their time.

Gain

Instant rewards, full meritocracy, fast matches, and the ability to monetize skill.

Empathy Map - Developers

Thinks and feel

They want to monetize their gaming skills and seek fairness
They feel the "pain" of feeling scammed by RNG and want the adrenaline of fair competition. They desire a sense of control and meritocracy.

Pay-to-win mechanics, RNG/luck factors, and no financial return on their time.

Gain

Instant rewards, full meritocracy, fast matches, and the ability to monetize skill.

Customer personas

Matteo

Age: 18–28
Location: Milan / Rome (urban)
Job / Status: University student or young worker
Income: €900–€1,600/month (low–medium disposable income)
Tech level: High (daily smartphone user, gaming casually)
Gaming habits:

- Plays during commute, breaks, evenings
- Prefers fast games (1–3 minutes)

Motivations:

- Wants fair skill games, not luck
- Enjoys competition

Frustrations:

- Hates RNG, ads, pay-to-win
- No Italian platform offering skill-only competitions

Why Dreampeasy fits:

- Merit-based, instant matches, small entry fees

Elena

Age: 25–35
Location: Italy or EU (remote worker)
Job / Status: Indie game developer / freelancer
Income: €1,500–€3,500/month
Tech level: Very high (Unity, Godot, C#, mobile publishing)
Professional habits:

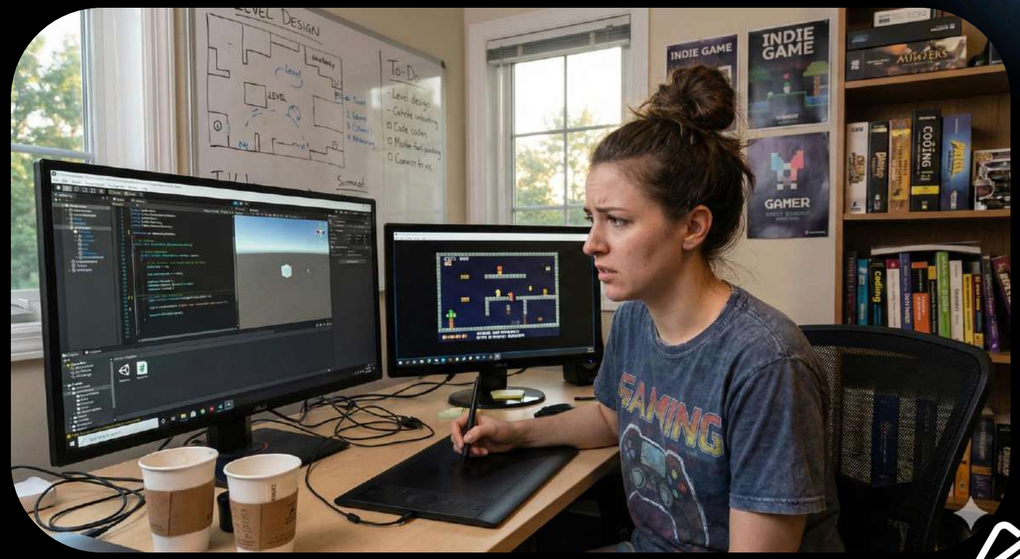
- Creates good gameplay but struggles with monetization
- Cannot spend money on marketing (UA = too expensive)

Motivations:

- Wants her game to be played
- Wants to monetize without ruining gameplay

Frustrations:

- App store visibility is low
- Ads ruin user experience
- Backend (payments, servers, anti-cheat) is complex



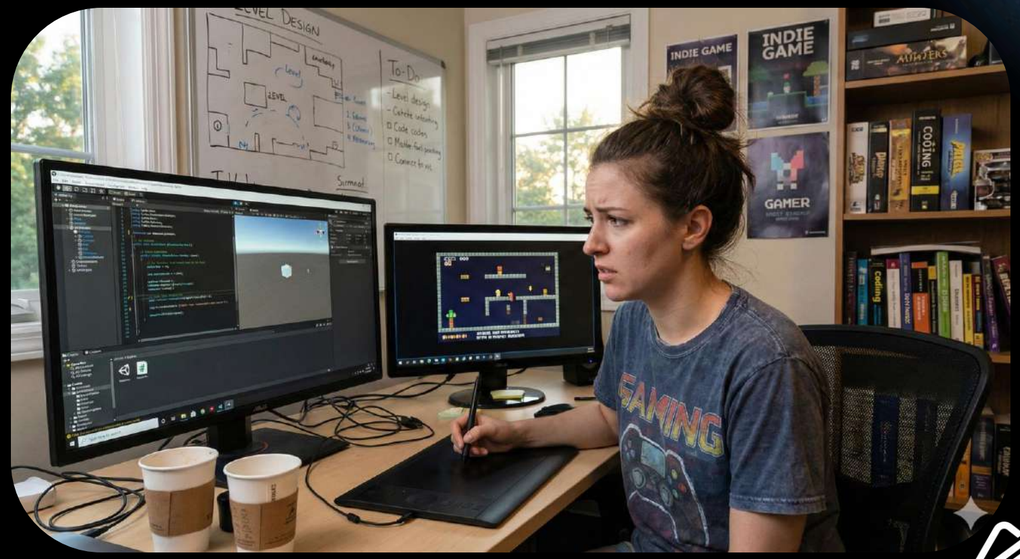
Customer personas

Matteo

Plays during "dead time" (commute/breaks). Hates gambling and "Pay-to-Win." Believes in meritocracy: if he loses, he wants to get better, not pay more.

Elena

Creates great gameplay loops but struggles with business. Cannot afford user acquisition costs and hates ruining her UI with intrusive banner ads.



Market friction - Gamers

Friction:
In Italy, **no platform** offers legal, skill-based, instant-reward competitions.
Current options are mostly free-to-play, pay-to-win, or luck-based.

Dreampeasy solves it with:
- ADM-compliant skill competitions
- Anti-cheat
- Instant matchmaking
- Transparent payouts
- Merit-based rewards

Market friction - Developers

Friction:

- **Low visibility on crowded app stores**
- **Weak monetization**
- **High technical and compliance costs**
- **Tournaments are hard to manage**

Dreampeasy solves it with:

- **Alternative distribution**
- **Automatic real-money monetization**
- **Full backend (anti-cheat, KYC, payments)**
- **Zero upfront costs**
- **Tournament-driven engagement**

Network effect

Cross-Side (Strongly Positive)
Gamers → Developers More players = more potential revenue for devs = more games integrated.

Developers → Gamers More quality games = higher attraction for competitive players.

Same-Side
Gamers → Gamers (Positive) More players = faster matchmaking, larger tournaments, bigger prize pools.

Developers → Developers (Negative if unmanaged) Too much competition harms small devs. Dreampeasy mitigates this with: curated discovery, rotating spotlights personalized visibility

Coping With Network Effects + Chicken & Egg

- We solve the **chicken-and-egg problem** by starting with our **own first game (WinWing)** to create activity and liquidity before opening to external developers.
- We attract developers with **no costs, full support** (anti-cheat, KYC, payments).
- Gamers generate activity with **competitions and tournaments**, reinforcing the loop.
- We protect trust with **anti-cheat, fair matchmaking, quality control**, so growth doesn’t reduce user experience.

Long-Term Stabilization Strategy

- We reduce negative same-side effects by giving developers:
  curated discovery, **rotating visibility**, **categories**, **fair exposure**.

- We keep gamers loyal with **rank history, match storage, friends system**, reducing multi-homing.

- Over time we create a strong flywheel:
  more gamers → more liquidity → bigger prize pools → more developers → better games → more gamers.

Price Structure

**Gamers-
Money Side**

- 5–15% take rate on buy-ins

60%

**Developers -
Subsidy Side**

- High revenue share (75–85%)
- 100% in early incentive phase
- Zero upfront fees

30%

Advertisers

- Tournament sponsorship
- Ads
- Analytics packages

10%

Price Structure

Category	Role / Item	Cost
Monthly Team Costs	Full-stack Developer	€2,400 / month
	Game Developer	€2,800 / month
	UX/UI Designer	€2,000 / month
	Product Manager	€1,200 / month
	QA Tester	€600 / month
Monthly Operations Costs	Customer Support	€800 / month
	Legal & Compliance	€4,000 / month
Monthly Tools	Figma + Notion + GitHub	€80 / month
Annual Costs	Hosting, Servers, AWS, Aruba, Infrastructure	€7,500 / year
MVP Costs Already Spent (UX/UI Grouped)	UX/UI + Brand Identity	$1,451.20 total
	Developers	$3,478.00 total
	Infrastructure (Aruba + AWS)	$113.90 total
Total MVP Spent	—	$5,043.10 USD

We did not include all the costs related to ADM/KYC/AML.
We need to collaborate with companies that already hold these licenses, because obtaining them independently is extremely expensive and requires a solid company with a significant financial capacity.

Subsidy sided

Our subsidy side is the developer side, because we subsidize them with high revenue share, zero upfront costs, and full backend/compliance support.

However, to solve the chicken-and-egg paradox, we don’t wait for developers to join. We launch with our own first-party game to generate early activity, tournaments and liquidity. Once the gamer base grows, the cross-side loop becomes attractive for external developers to join

LEARN MORE ↗

Ignition Strategy

Pilot Phase

• Target small/medium indie studios • Offer 100% revenue share for 3–6 months • Free technical integration support , introduce open source games.

Seed Developers

• Target small/medium indie studios • Offer 100% revenue share for 3–6 months • Free technical integration support , introduce open source games.

Build minimun Game Catalog

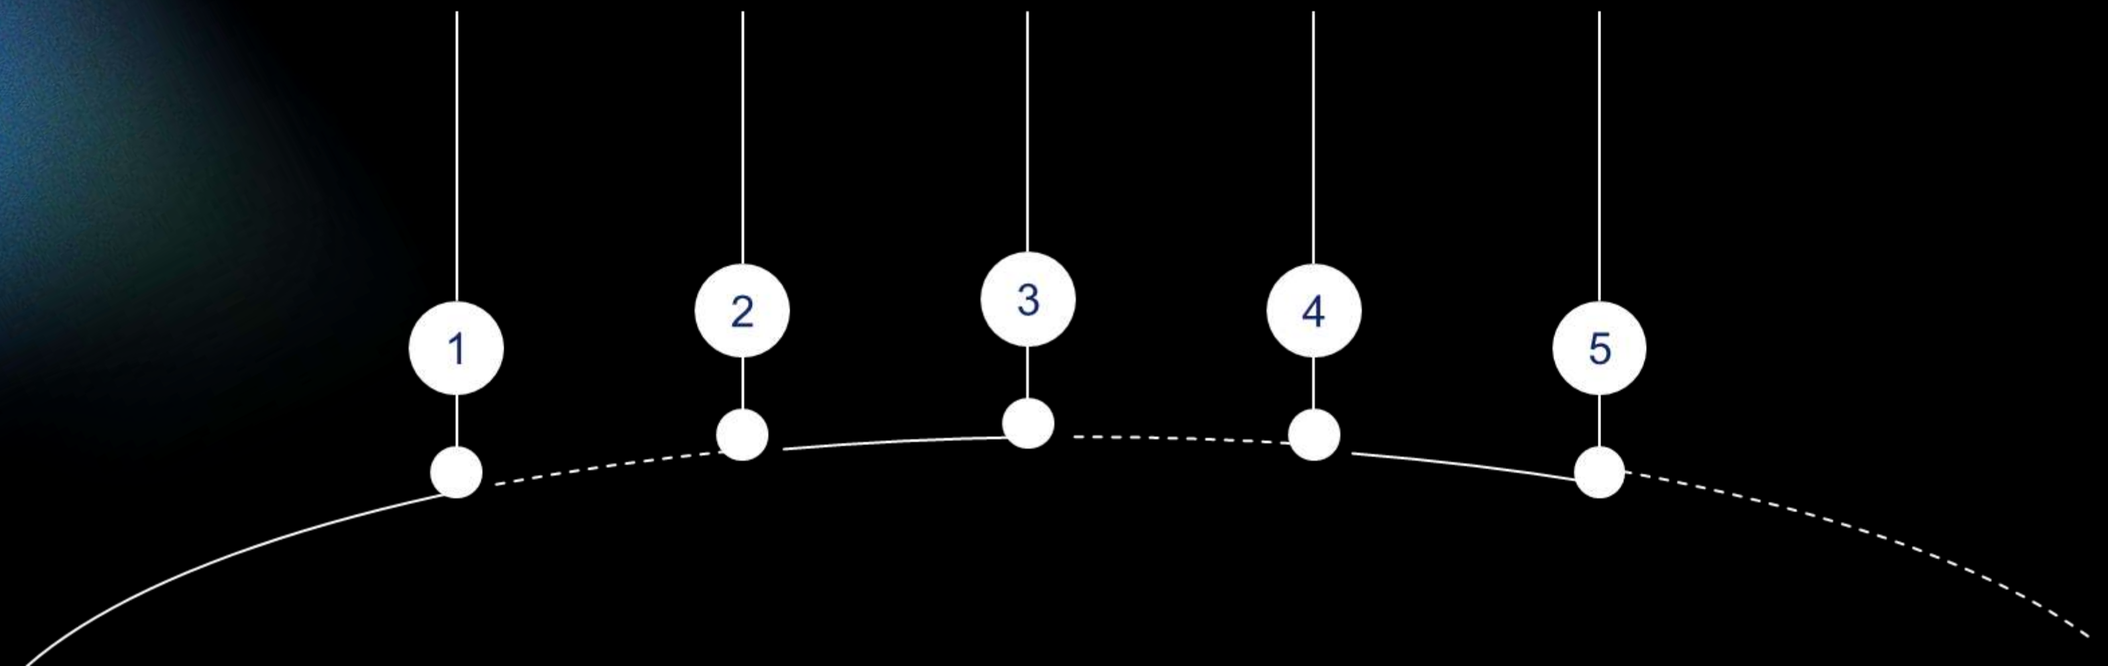
Necessary to activate cross-side network effects.

Aquire Gamers

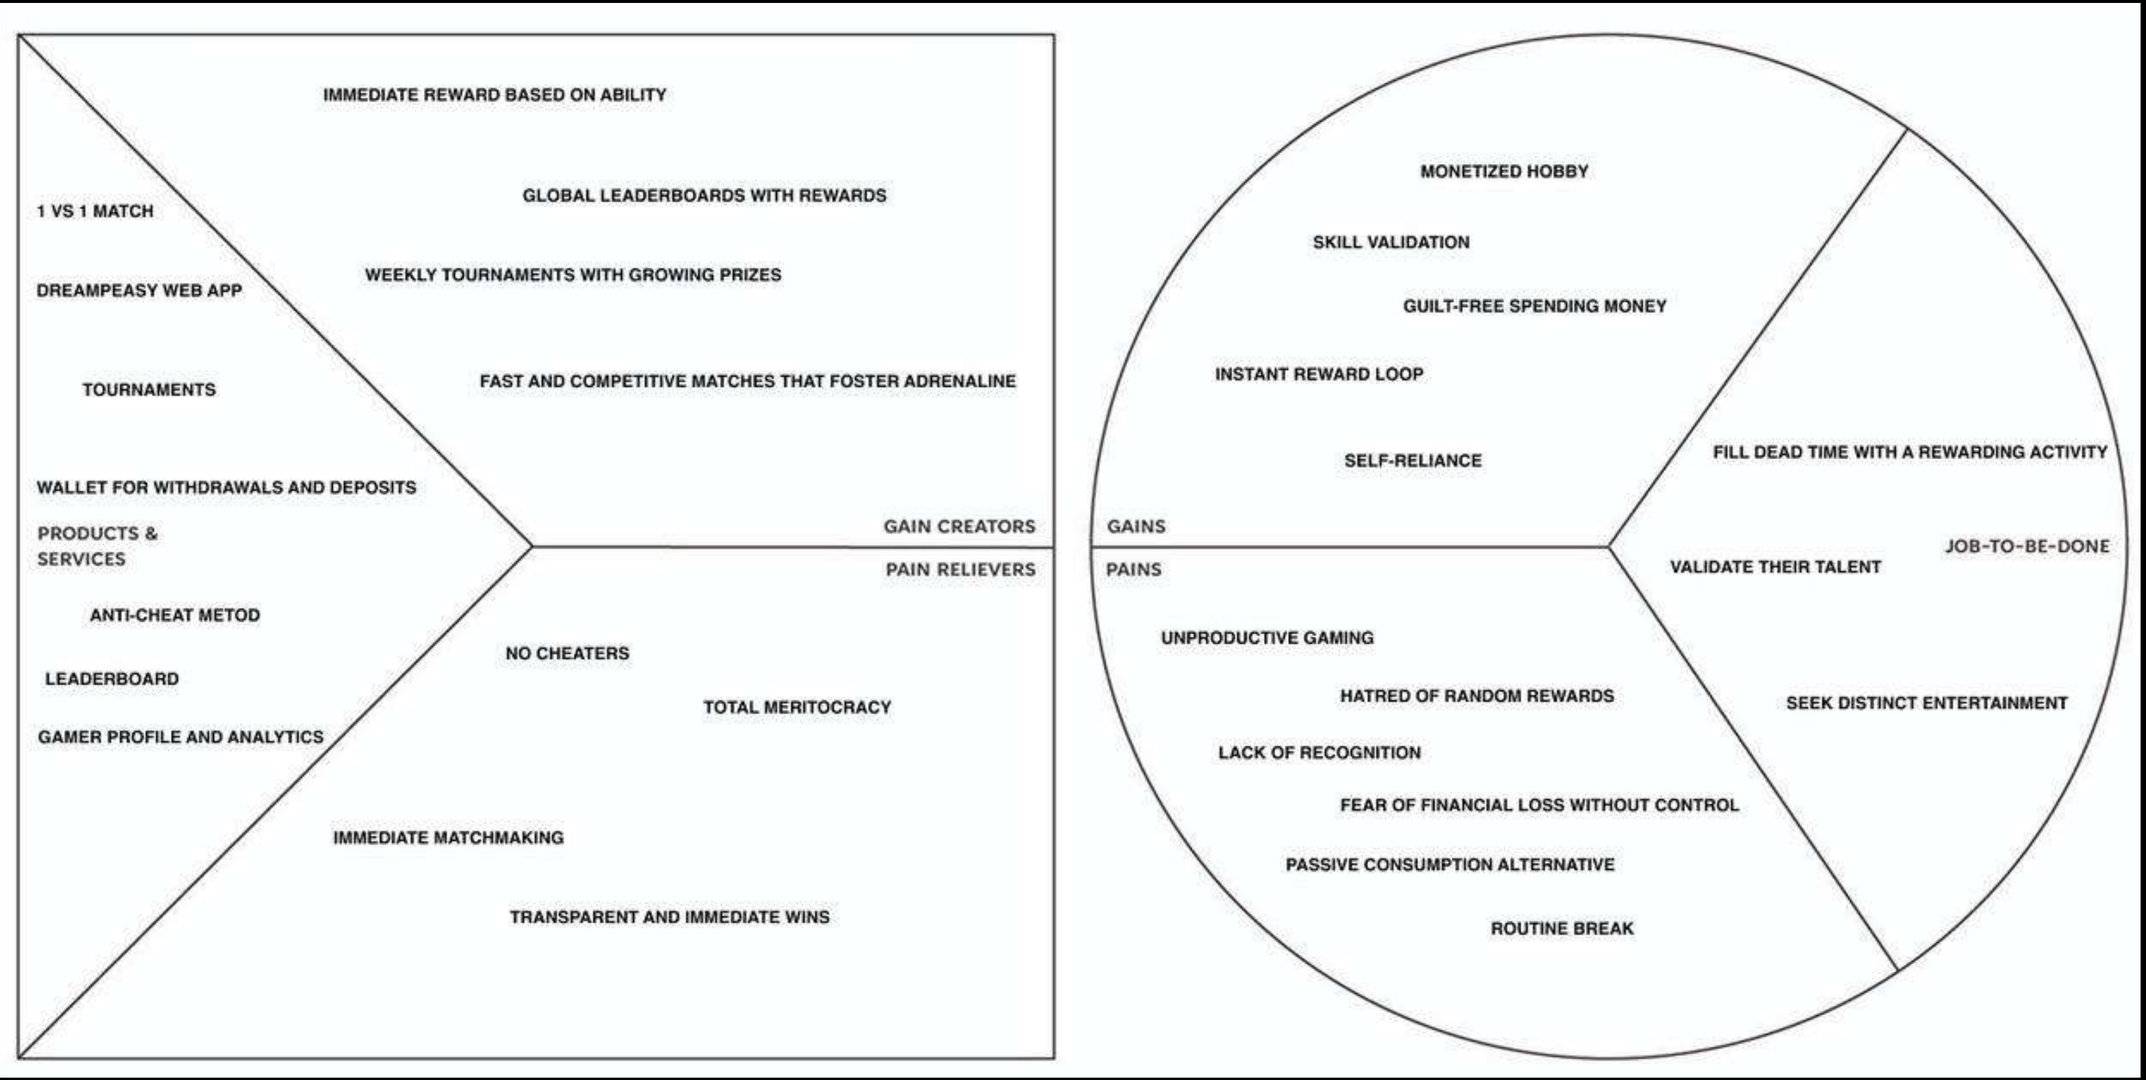
• Gaming influencers • Referral programs • Targeted ads • Competitive communities

Kick Start Competition

• Launch first tournaments with guaranteed prize pools • Media coverage • Global leaderboards



Value proposition Gamers



Value Proposition Canvas- (Gamers)

Customer Jobs

- **Compete fairly:** matches where skill decides.
- **Monetize skill:** earn real rewards for talent.
- **Gain recognition:** visibility through rankings.
- **Fill dead time:** fast, adrenaline matches.
- **Win by skill:** no randomness or luck.

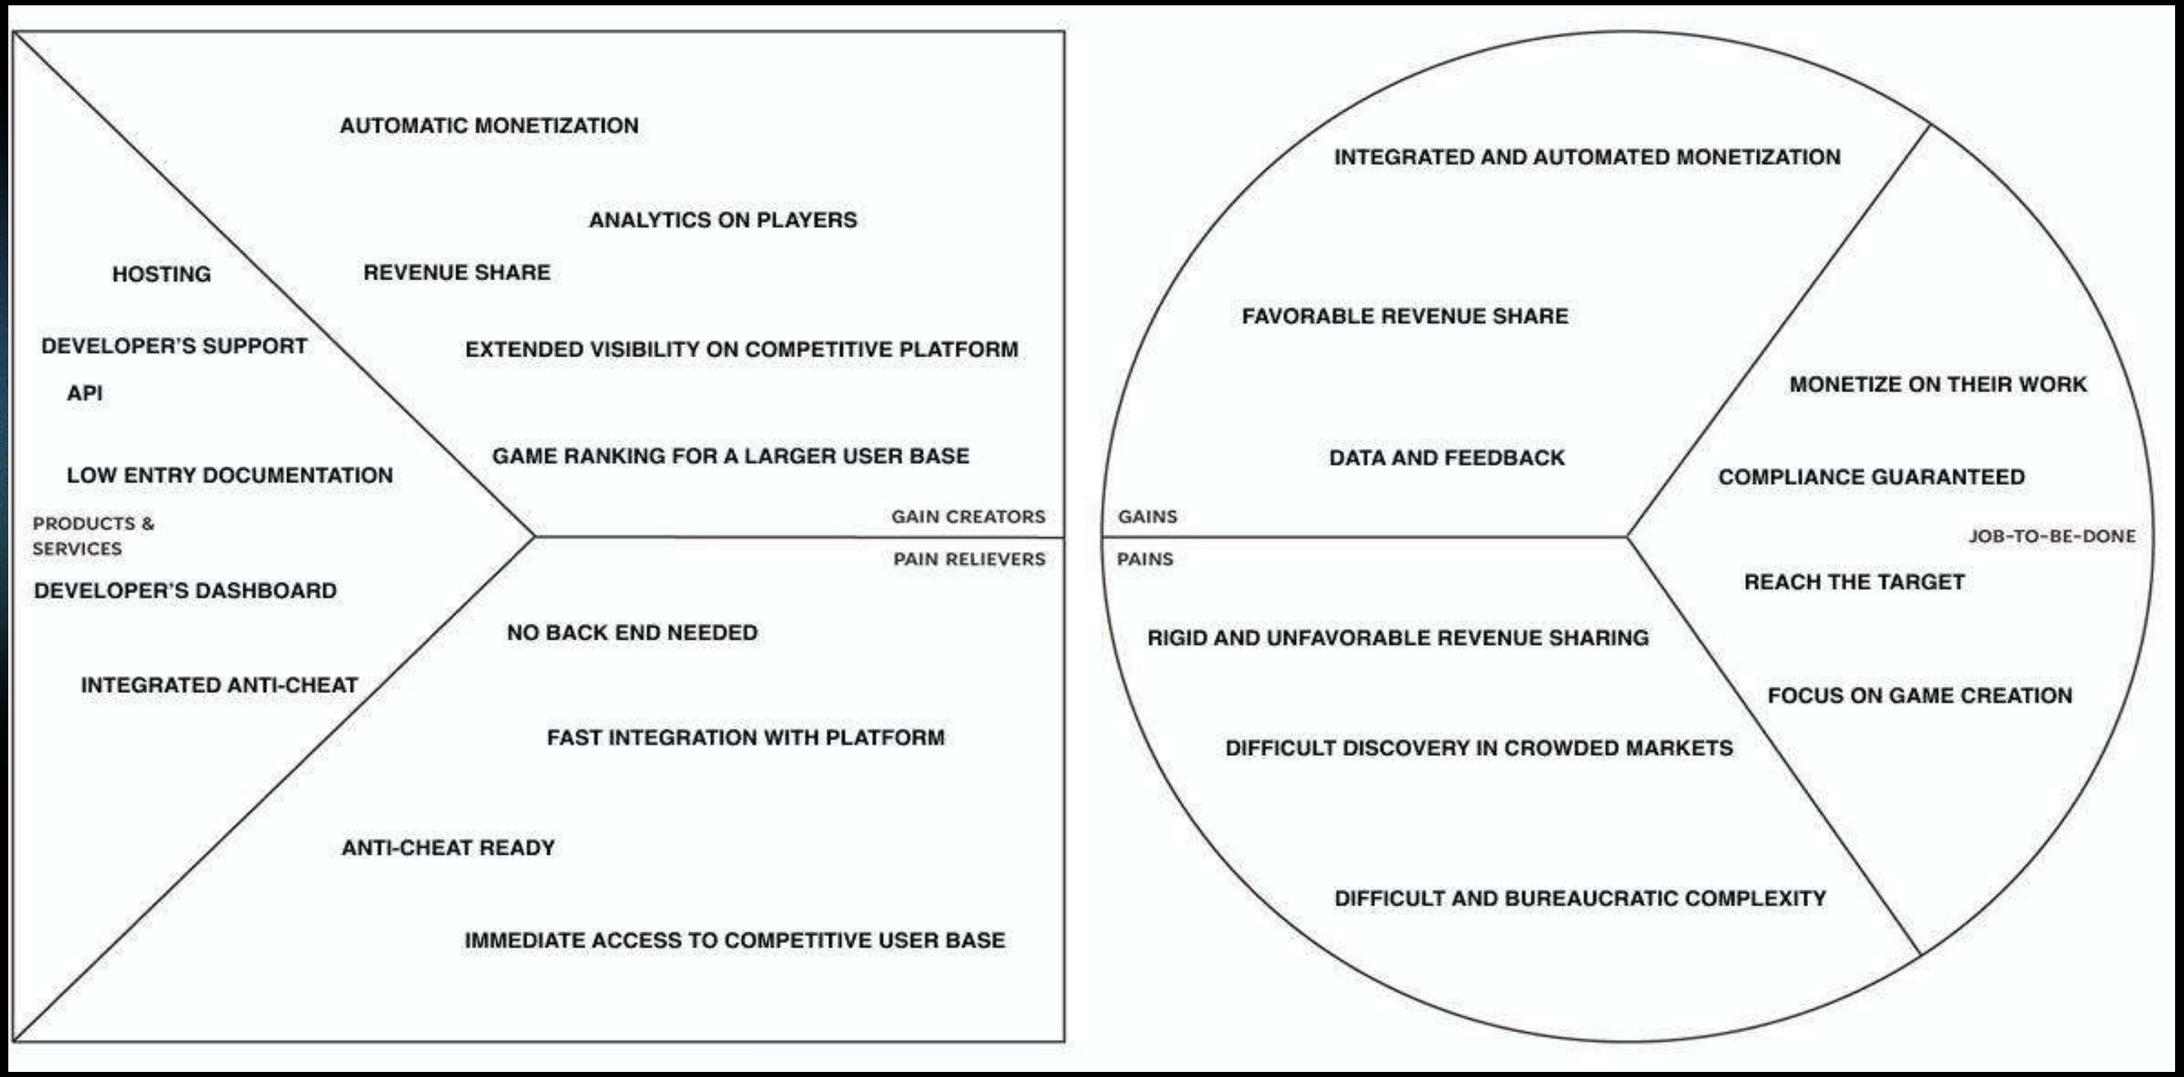
Pains

- **Pay-to-win:** losing because others spend.
- **RNG frustration:** feeling “scammed” by randomness.
- **No return:** gameplay gives no rewards.
- **Unbalanced opponents:** unfair matchmaking ruins experience.

Gains

- **Instant rewards:** immediate payout after wins.
- **Pure meritocracy:** outcomes depend only on skill.
- **Bragging rights:** status on leaderboards.
- **Fast matches:** quick competitive sessions.
- **Control:** players feel responsible for outcomes.
- **Anti-cheat:** guarantees fair play.

Value proposition Developers



Value Proposition Canvas - developers

Customer Jobs

•Customer Jobs

•**Monetize sustainably:** stable, predictable revenue.

•**Reach competitors:** access to competitive gamers.

•**Avoid complexity:** no backend or compliance work.

•**Use analytics:** understand player behavior.

•**Integrate fast:** onboarding without effort.

•Pains

•**Crowded stores:** low visibility.

•**Low revenue share:** platforms take too much.

•**Regulatory burden:** KYC/AML adds cost.

•**No visibility:** small studios ignored.

•**Technical limits:** backend is expensive.

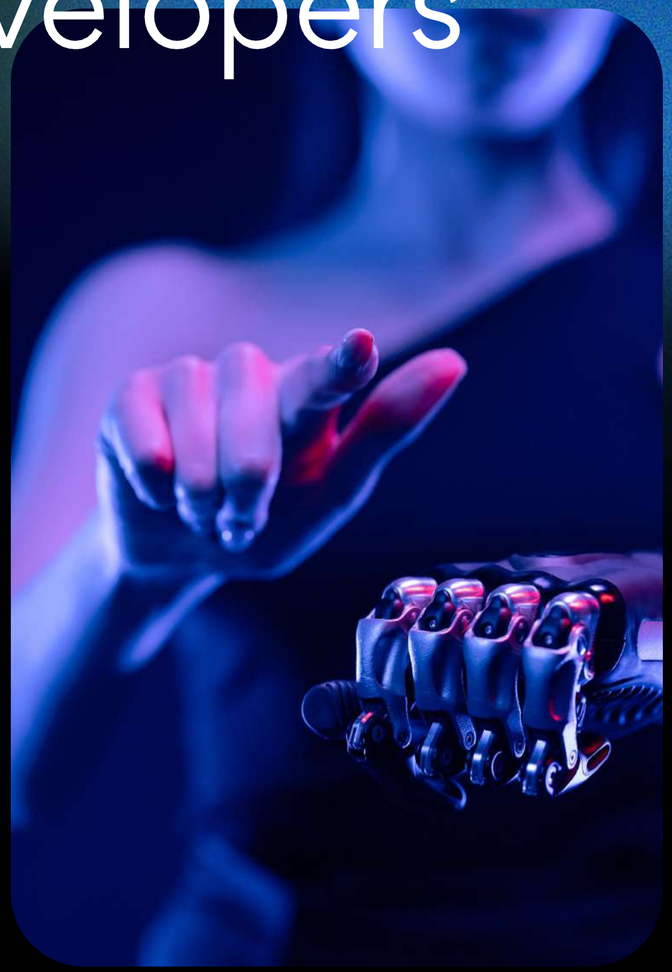
•Gains

•**Immediate earnings:** revenue from day one.

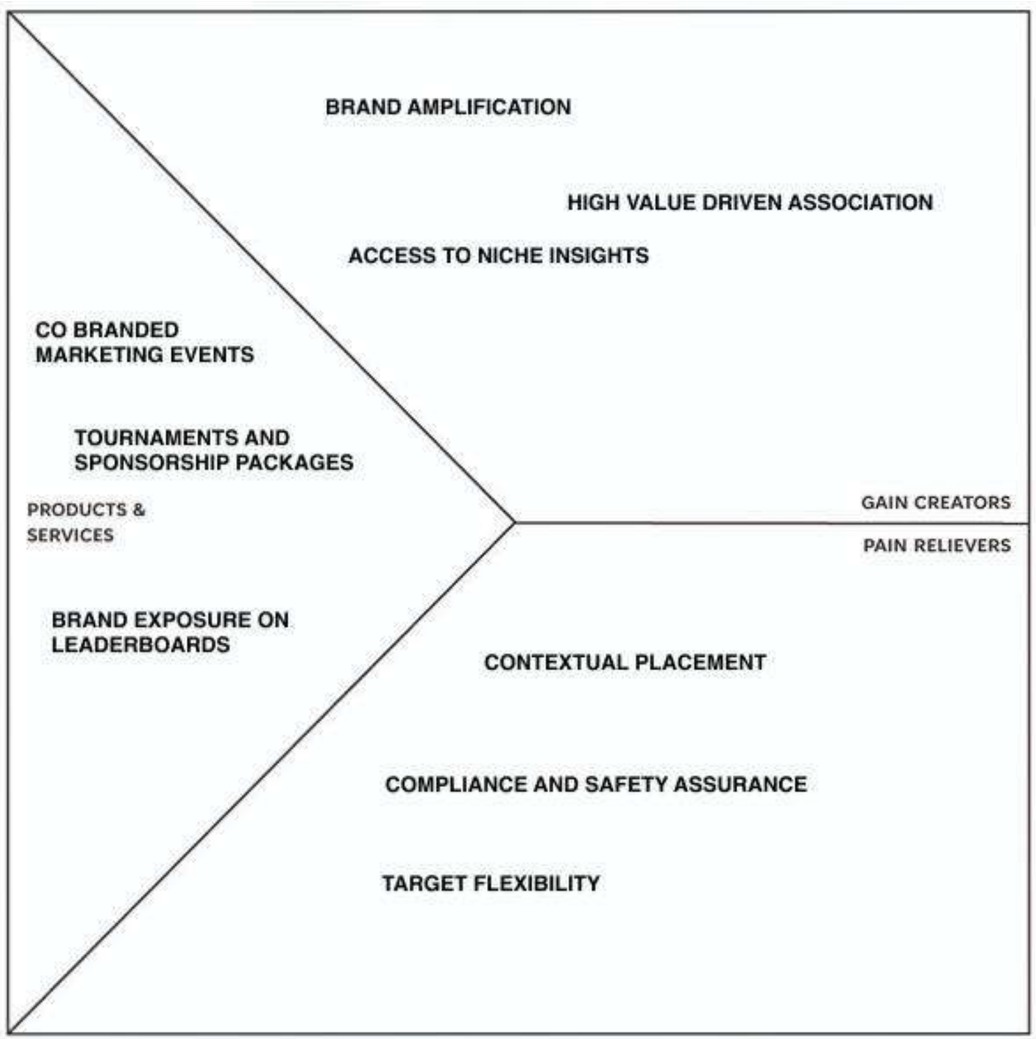
•**High revenue split:** better than app stores.

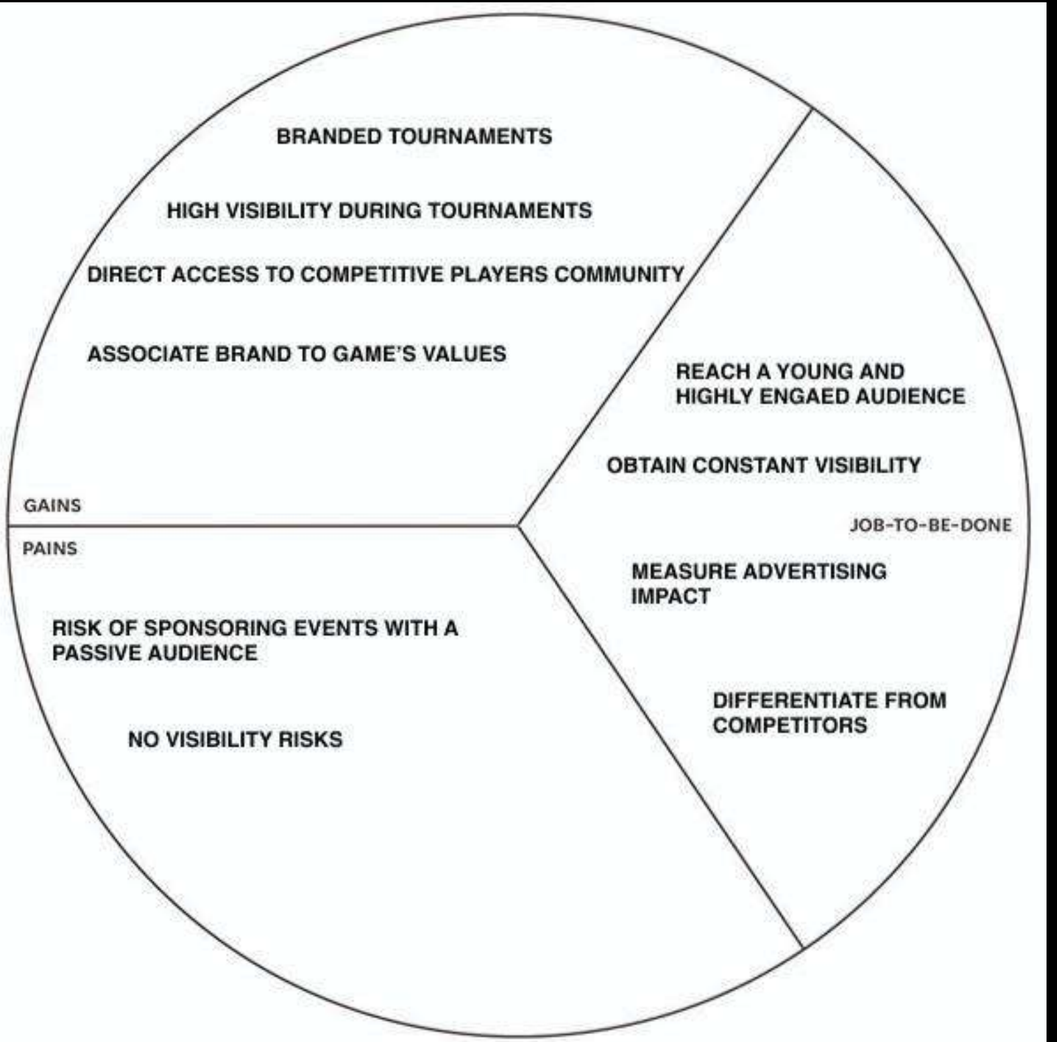
•**Compliance included:** KYC/AML done by us.

•**Dashboard:** real-time metrics and insights.



Value proposition Advertising





Value Proposition Canvas - Advertising

Customer Jobs

- **Reach young gamers:** target competitive audiences.
- **Brand + performance:** associate image with merit.
- **Sponsor events:** high-visibility formats.

Pains

- **Ads ignored:** low attention in traditional ads.
- **Brand safety:** risk of unsafe environments.
- **Unreliable audience:** low engagement quality.

Gains

- **High-attention moments:** peak visibility in matches.
- **UGC content:** players amplify the brand.
- **Engaged audience:** real, active users.

Pain Relievers / Gain Creators

- **Tournament sponsorships:** built-in visibility.
- **Logo placement:** exposure in key gameplay moments.
- **Transparent analytics:** real performance data.
- **ADM-compliant:** safe, regulated environment.

Business model canvas

Key Partnerships

Italian Regulators (ADM)
Necessary for legal operation and compliance

Payment Gateway Providers
For fast and secure cash transactions

Influencers/Streamers
For audience amplification

Strategic Developers/Indie Studios
To ensure quality initial content

Key Activities

Ecosystem Orchestration
Shaping strategy

Platform Development and maintenance
Anti-Cheat system

Regulatory Management
ADM/KYC compliance

Content Curation
Scouting developer

Key Resources

Tech structure/IP
Proprietary matchmaking and anti-cheat algorithms

Legal/Compliance
ADM/AML/KYC licenses and infrastructure

Human
Platform development team, regulatory specialists

Value Propositions

Gamers
Skill-based cash competitions, fair matchmaking, anti-cheat regulated environment

Developers
Automated monetization, favorable revenue share, discovery channel

Advertisers
Access to analytics, targeted advertising

Customer Relationships

Gamers
Communities and tournaments, Leaderboard

Developers
Development integration

Account management
For strategic partnership

Channels

Gamers acquisition
targeted marketing, influencer gaming, referral method

Developers acquisition
Direct scouting, influencer developers campaign

WebApp distribution
Through proprietary digital platform

Customer Segments

GAMERS (money side)
18-35 casual hustler looking for monetize their skills in brief competitive sessions

Developers (subsidy side)
indie and little studios looking for organic growth and visibility

Advertisers/Data buyers
companies looking for a highly competitive target

Cost Structure

Fixed Costs
Legal/regulatory costs (ADM/KYC Compliance), core team salaries

Variable Costs
Revenue share (payouts to Developers), marketing and user acquisition costs (CPA), transaction and prize management costs

Revenue Streams

Take Rate
Percentage on every buy-in

Developers una tantum
Fixed price for inserting a new game on platform

Advertising/Data Revenue
Advertising spaces and analytics

Business model canva

- Gamers (18–35), Indie Developers, Sponsors/Brands

- **Gamers:** fair skill matches + instant rewards
- **Developers:** easy monetization + plug-and-play SDK
- **Sponsors:** high-engagement audience + analytics

- Mobile/Web App, Influencers, Developer Scouting, Sponsored Tournaments

- Competitive community + tournaments
- Developer support (SDK + integration)

- Take rate on buy-ins
- Sponsorships
- Developer monetization options

- Anti-cheat + matchmaking
- ADM/KYC/AML stack
- Tech & compliance team
- Game catalog

- Platform development
- Ecosystem orchestration
- Developer acquisition
- Tournament operations
- Compliance management

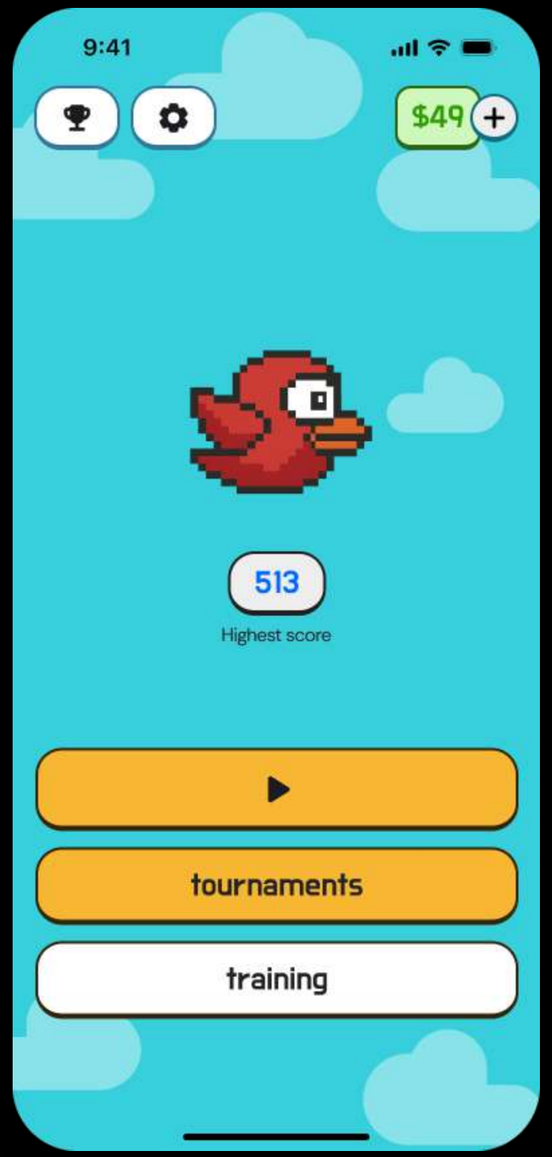
Winwing

A skill-based flying game where players avoid obstacles in fast 1vs1 and tournament competitions.



Train your skills now!!

Summary

Problem → No legal, skill-based platform; pay-to-win frustration; devs can’t monetize.

Solution → Fair competitions, instant payouts, full compliance, plug-and-play SDK.

Platform → Gamers + Developers + Advertisers connected through tournaments and anti-cheat.

Network Effects → WinWing kickstarts liquidity → more gamers → more devs → better games.

Scalability → Digital, regulated, and easily expandable across EU markets.
