DIGITAL PRODUCT MANAGEMENT
PROJECT WORK

AA 2025 -26

POLIMI GRADUATE SCHOOL OF MANAGEMENT

Presented by:
ENRICO CUOMO
CHING HUANG
LORENZO FEDERICO LAI
JONATHAN PAVONCELLO

MODULE #1 - SUBITO'S GENERAL OVERVIEW, COMPANY'S MISSION AND PRODUCT VISION

- Founded in **2007** in Milan by **Schibsted Media Group**, now part of the **Adevinta Group**
- Italy's leading online re-commerce platform and second largest e-commerce platform
- Started as a simple classifieds website and evolved into a fully integrated digital marketplace
- Introduced secure payment and shipping services through TuttoSubito
- Multicategory marketplace (Motors, Real Estate, Market, Jobs)
- Free listings with paid premium visibility options
- Tools and services for both private and professional sellers
- Reaches half of the Italian population every month

"At Subito, desires and dreams become reality: We are committed to helping people turn them into tangible opportunities"
from: https://info.subito.it/about.htm

Applying the 4Ps framework:

TURN EVERYDAY RE-COMMERCE INTO THE MOST TRUSTED, EFFORTLESS AND SUSTAINABLE WAY FOR PEOPLE TO EXCHANGE VALUE AND REALISE DREAMS

PROBLEM

WHAT FUNDAMENTAL PROBLEM ARE WE SOLVING?

The re-commerce environment remains fragmented and inherently trust-sensitive across private buyers, private sellers and professional vendors
Exchanges are often perceived as risky and operationally complex, reducing users' confidence and willingness to transact regularly within this kind of marketplaces
This friction prevents re-commerce from reaching its full potential, leaving valuable goods unused and limiting its broader contribution to the circular economy

PROMISE

WHAT FUTURE ARE WE COMMITING TO CREATE?

Subito commits to making re-commerce as simple, protected and reliable as traditional e-commerce, while preserving the human and community driven nature of peer-to-peer exchange
In this future, buyers and sellers feel confident, empowered and in control of their transactions, choosing second-hand as a natural, everyday and responsible habit
Subito aims to enable millions of people to turn everyday exchanges into small, responsible actions for the planet: turning everyday transactions into meaningful contributions to a more circular and sustainable economy

POSITIONING

WHAT MAKES OUR APPROACH DISTINCTIVE?

Subito positions itself not as a simple classifieds platform: by combining open access listings for private sellers, structured identity and trust systems (including badges), integrated transaction infrastructure, professional tools for businesses, premium visibility and advertising services, dedicated editorial contents and human customer support mixed with gamified digital learning guides; it transforms informal listings into secure, scalable and trusted transactions within a single ecosystem connecting private individuals and businesses

PRINCIPLES

WHAT VALUES AND BELIEFS GUIDE US?

- Trustful transactions by design
- Simplicity through platform delegation
- Integration over fragmentation
- Customer happiness as a responsibility
- Conscious resell and reuse of products for a greener everyday life

MODULE #1 - PRODUCT STRATEGY STATEMENT

Deepen engagement within the community to create a **self-reinforcing data-based advantage** that elevates **trust**, **personalisation** and **habitual usage**, reinforcing Subito's **long-term competitive leadership**

- Leverage logged-in behavioural data to deliver increasingly personalised and relevant experiences
- Continuously improve service quality through data-driven insights
- Strengthen trust and safety to match or outperform traditional e-commerce standards
- Increase retention and habitual usage within the community
- Reduce anonymous usage

Moreover, **expanding the portfolio with value-added services** would not only reinforce all the strategic priorities above, but also unlock new monetisation opportunities, increasing both user perceived value and revenue diversification

MODULE #1 - PRODUCT STRATEGY: LEAN CANVAS

PROBLEM:

- Fear of scams and unreliable counterparts in peer-to-peer transactions
- Time-consuming coordination between buyers and sellers (chat, payment, shipping, negotiation)
- Difficulty in efficiently finding relevant and well-matched listings within a fragmented re-commerce environment

EXISTING ALTERNATIVES:

- Other structured second-hand marketplaces (Vinted, eBay, Facebook Marketplace)
- Vertical specialised platforms (AutoScout24, Immobiliare.it)
- Informal local exchanges (social groups, word of mouth, in-person transactions)
- Traditional e-commerce (buying new instead of second-hand)

SOLUTION:

- Secure and easy-to-use payments and integrated shipping (TuttoSubito, Purchase Protection)
- Built-in trust system (reviews, badges)
- Human customer support (Customer Happiness Centre)
- Personalised discovery and matching tools (saved searches, alerts, tailored recommendations)
- Dedicated tools for professional sellers (Shop, subscription, MultiGestionale - the Subito's management software)
- Paid visibility options (ad placements, listing boosts)
- Anti-scam education and user guidance (Magazine, guides, in-app learning games)

UNIQUE VALUE PROPOSITION:

Subito makes second-hand experience in Italy simple, structured, protected and personalizable, enabling convenient exchanges within a trusted community marketplace

HIGH LEVEL CONCEPT:

An Italian re-commerce platform enabling structured second-hand transactions between users, including both private individuals and professional sellers

UNFAIR ADVANTAGE:

A long-established brand reputation, a massive Italian user base and nearly two decades of accumulated behavioural and transactional data powering proprietary systems that generate strong, self-reinforcing network effects across the ecosystem

CHANNELS:

- Mobile App
- Website
- Web Search Engines
- Social Media
- Word of Mouth
- Email and Push notifications

CUSTOMER SEGMENTS

- **Private users participating in second-hand exchanges** (buying and selling their unused goods)
- **Professional sellers and businesses** primarily selling new, used or refurbished products or services at scale, while also participating as buyers when relevant

EARLY ADOPTERS:

- Already use Subito frequently
- Value improvements in trust, protection and transaction transparency
- Are sensitive to personalised experiences and time saving, structured services
- Are comfortable with digital and mobile-first interactions

KEY METRICS

Logged-in Daily Active Users (North Star Metric)
All metrics in module 4

COST STRUCTURE:

- Technical platform development
- Customer support (CHC)
- Marketing & communication

REVENUE STREAMS:

- Paid visibility options
- Subscription plans for professional sellers
- Purchase Protection via TuttoSubito
- Third party ADV
- Third party data sales for market research

MODULE #1 - FROM LOGGED DAU TO VISION AND MISSION

Increasing **logged-in Daily Active Users** means moving from anonymous traffic to traceable, data-generating interactions

The collection of logged-in usage data enables Subito to:

- Build more personalised and relevant experiences
- Continuously improve service quality through data-driven insights
- Strengthen trust & safety mechanisms based on behavioural patterns
- Track habitual community usage and translate it into higher retention
- Develop structured services that unlock new monetisation opportunities

All of this strengthens the relationship with the community, which becomes increasingly loyal to a service that is better aligned with its needs and expectations

MORE LOGGED ENGAGEMENT → RICHER DATA → BETTER QUALITY AND SAFER EXPERIENCE → HIGHER USER CONFIDENCE → STRONGER RETENTION → STRONGER COMMUNITY → REINFORCED COMPETITIVE LEADERSHIP

Subito positions itself at the forefront of this ongoing transformation

By leveraging its data advantage and deep community engagement, Subito further increases trust, simplicity and reliability in every transaction

As trust grows and friction decreases, re-commerce evolves from an alternative option into a natural, mainstream choice as reliable as traditional e-commerce and increasingly recognised as a responsible and sustainable everyday habit contributing to the circular economy

This is how Subito can lead the sector and realise its Product Vision: to turn everyday re-commerce into the most trusted, effortless and sustainable way for people to exchange value

In conclusion, looking at the broader picture, Subito ultimately positions itself as the enabling tool through which the Company Mission materialises
In this sense, it allows people's needs, desires and aspirations to translate into reality, fully aligning the product evolution with the company's purpose

MODULE #2 - VALUE PROPOSITION CANVAS: PRIVATE USERS (BUYERS & SELLERS)

Private users are **people participating in second-hand exchanges both as buyers and sellers**
They seek a simple, secure and reliable way to trade goods at fair prices within a structured and trusted community environment
They value transparency, personalised discovery and control over the transaction process, expecting an experience comparable to e-commerce while maintaining flexibility and an effective contribution to environment
As sellers, they also value the possibility to enhance the visibility of their listings when needed, accelerating sales through optional promotional tools

PRODUCTS & SERVICES

- Integrated purchase protection and shipping services (TuttoSubito)
- Free listing publication
- Access to multiple vertical categories (motors, real estate, jobs, home, electronics, etc.)
- Paid visibility options (Boosts, Top Ads)
- Personalised discovery and matching features (saved searches, alerts, tailored recommendations, favourites, filters)
- In-app messaging
- Transaction options within listings: buy at listed price - send offer / negotiate - contact seller
- Reviews and rating system
- Reputation badges for private users
- Customer Happiness Centre (human support)
- Anti-scam education and guidance content
- Purchase guidance content and educational articles (Subito Magazine)
- Interactive in-app quizzes and gamified learning tools

GAIN CREATORS

- Enabling a sense of safety and confidence through responsible and accountable community behaviour
- Integrated in-app communication streamlining coordination and reducing friction between parties
- Simplified market entry through free listing publication, lowering barriers for private sellers
- Enhanced competitive positioning through optional paid visibility tools
- Reinforcement of sustainable behaviours through dedicated contents
- Self-service educational tools improving platform awareness and safe usage
- Flexible transaction flows enhancing user autonomy and control over how exchanges are completed

PAIN RELIEVERS

- Structured and integrated purchase protection and shipping system with clear step-by-step guidance for both buyers and sellers, reducing confusion, process fragmentation and increasing ease and speed of completion
- Secure embedded payment mechanisms protecting both parties from fraud and financial risk
- Real-time tracking and status visibility tools reducing uncertainty and increasing control over shipment and transaction progress
- Guided content reducing complexity and usability barriers for inexperienced users
- Transparent reputation signals and standardized listing information reducing information asymmetry and strengthening marketplace trust
- Personalised discovery and filtering system reducing search friction and improving the probability of finding relevant listings
- Dedicated human support and structured dispute management reducing uncertainty, conflict complexity and increasing trust in resolution

GAINS

- Quickly find relevant listings at fair prices
- Easily create and publish listings
- Access clear and complete information about listings and counterparts
- Reliably assess the credibility of the other party
- Flexibility in how to transact (buy instantly, negotiate or contact)
- Secure and reliable payment execution
- Confidence that items match the description and arrive safely
- Clear and guided transaction and shipping process
- Real-time tracking of payment and shipment status
- Fast, flexible, easy to understand path from listing/search to completed deal
- Effective support and dispute resolution
- Strong sense of community trust
- Convenience comparable to traditional e-commerce
- True ontribution to sustainability

PAINS

- Difficulty finding relevant listings and assessing fair pricing
- Limited transparency on listing quality, seller/buyer credibility and visibility criteria
- Risk of scams, misleading information or unreliable counterparts
- Fragmented and time consuming transactions
- Uncertainty about payment execution, shipment timing and item condition
- Limited real-time visibility over transaction status
- Complex or unclear shipping/pickup procedures
- Long path from listing/search to completed transaction
- Inefficient dispute resolution when problems occur

JOBS

BUYER:

- Find and compare relevant listings
- Evaluate seller credibility and listing information
- Contact seller and negotiate price or conditions
- Complete payment and choose delivery option
- Track shipment or arrange pickup
- Receive item and leave review

SELLER

- Create and publish listing
- Set price and transaction conditions
- Promote listing for greater visibility
- Evaluate buyer credibility and respond to messages
- Agree on price and delivery method
- Receive payment and ship the item
- Confirm transaction completion and receive review

subito

POLIMI GRADUATE SCHOOL OF MANAGEMENT

MODULE #2 - VALUE PROPOSITION CANVAS: PROFESSIONAL SELLERS

Professional users are **businesses** and **professionals** who primarily operate as sellers within the marketplace, while occasionally acting as buyers when relevant
They seek clarity, security and ease of process, but also dedicated tools that enhance operational efficiency and support structured sales activities
As paying subscribers, they expect adequate visibility, professional support and measurable, reasonably short-term returns on their investments, along with increased credibility and recognition as trusted sellers

PRODUCTS & SERVICES

- Subscription plans
- Dedicated Shop page (customizable branded storefront)
- Professional certification badge
- Enhanced listings
- Call tracking system
- Advanced visibility solutions like InCima+/InVetrina+ (VendiloSubito)
- Geolocalised advertising formats (Subito Local)
- MultiGestionale (Subito's management software)
- Dedicated support
- Integrated purchase protection and shipping services (TuttoSubito)
- Access to multiple vertical and professional categories
- Personalised discovery & matching features
- In-app messaging
- Reviews and rating system
- Anti-scam education and platform guidance content
- Subito Magazine and educational resources
- In-app learning tools

GAIN CREATORS

Although their main role is selling, when acting as buyers they perceive as gain creators the same ones of private users

- Enabling a sense of safety and confidence through responsible and accountable community behaviour
- Integrated in-app communication streamlining coordination and reducing friction between parties
- Enhanced competitive positioning through strong paid visibility tools
- Self-service educational tools improving platform awareness and safe usage
- Flexible transaction flows enhancing user autonomy and control over how exchanges are completed
- Dedicated Shop and professional badge increasing seller credibility and reputation and reducing competitive opacity
- Advanced visibility tools (InCima+, InVetrina+, Subito Local) improving listing visibility fairness at reasonable prices
- MultiGestionale reducing manual workload and centralising and streamlining listing management

PAIN RELIEVERS

Although their main role is selling, when acting as buyers they perceive as pains relivers the same ones of private users

- Structured and integrated purchase protection and shipping system with clear step-by-step guidance reducing confusion, process fragmentation and increasing ease and speed of completion
- Secure embedded payment mechanisms protecting from fraud and financial risk
- Real-time tracking and status visibility tools reducing uncertainty and increasing control over shipment and transaction progress
- Guided content reducing complexity and usability barriers for inexperienced users
- Transparent reputation signals and standardized listing information reducing information asymmetry and strengthening marketplace trust
- Dedicated human support and structured dispute management reducing uncertainty, conflict complexity and increasing trust in resolution
- Demonstrable and short-term impact of investments on lead generation, conversion and revenue

GAINS

- Easy and professional listing creation at scale through intuitive management tools
- Transparent and sustainable visibility and sponsorship costs
- Higher conversion rate from contact to sale
- Access to high-quality buyers and reliable counterpart information
- Ability to objectively assess counterpart credibility
- Clear and flexible transaction management
- Secure and reliable payment reception with real-time transaction tracking
- Faster time from listing publication to completed sale
- Predictable return on marketplace investments with sustainable customer acquisition cost
- Clear and effective dedicated support and dispute resolution

JOBS

- Select and manage the appropriate subscription plan
- Build and manage its branded storefront (Shop)
- Create and publish a listing or listings at scale
- Set price and conditions
- Promote the listings
- Integrate Subito's management systems with existing ones
- Configure a new MultiGestionale
- Evaluate possibile buyers credibility and seriousness
- Manage negotiations through messages/emails/calls
- Agree on price and delivery method
- Prepare and ship the item (or organise pickup)
- Monitor transaction completion
- Receive and verify payment
- Receive confirmation of receipt
- Collect and manage reviews

PAINS

- Unclear visibility criteria and strong dependence on paid promotion to remain competitive
- Lack of price transparency and perceived unfair competition among listings
- Difficulty building professional credibility and trust in the marketplace
- High and uncertain customer acquisition costs with unclear ROI on subscriptions and visibility investments
- Complex or costly listing creation and promotion for small professionals
- Incomplete or misleading (scams) counterpart information
- Fragmented and time-consuming transaction process
- Uncertainty around payment execution, shipment status and delivery instructions
- Long path from listing publication to completed transaction
- Complex or inefficient dispute resolution process

subito POLIMI GRADUATE SCHOOL OF MANAGEMENT

MODULE #3: HYPOTESIS, EXPERIMENTATION, MVP & VALIDATION

Hypotheses can test different assumptions about user behaviour, market needs, or product changes
In this section, we focus specifically on **hypotheses related to the introduction of new product features**
The set of hypotheses we developed is grounded in the previously defined strategic objectives and related business goals and represents potential improvements that could help achieve them, always considering measurable behavioural metrics as indicators of progress

The target thresholds associated with each metric are **inspired by benchmarking and interpolations of different improvement ranges commonly discussed in literature and articles on digital platforms**
Since not all metrics correspond exactly to those described in the literature, sometimes information was **interpreted and adapted considering conceptual proximity to the analysed metrics and the plausibility of achieving the proposed improvement or decrease**

SOME USEFUL EVIDENCES TO BETTER UNDERSTAND THE NEXT STEPS:

- In the literature on digital platforms and e-commerce, NPS is widely used as a proxy for overall customer satisfaction/happiness, although it is not directly measured in our case, it provides a conceptual reference to interpret the metrics belonging to that category; since even small variations in NPS (around 1-2%) can generate meaningful business value, we adopt similar improvement thresholds for the metrics related to customer happiness: https://it.surveymonkey.com/learn/customer-feedback/net-promoter-score-benchmarks-customer-loyalty/
- Reviewing literature on digital marketplaces, we can state that average improvements in customers stickness/engagement around 5%, can be considered plausibile; therefore, we defined slightly more conservative validation thresholds (3% for the simplest to achieve and 4% for the hardest) as realistic and achievable targets for our metrics belonging to that category: https://www.shopify.com/blog/customer-stickiness
- Benchmark studies on digital products suggest that feature adoption often tends to stabilise around 20-22% over time; for this reason, we consider incremental improvements of about 2-3% per iteration as realistic targets for the increasing of the metrics related to existing feature adoption (optimization), while around 4-6% for the ones related to new features (go faster): https://userpilot.com/blog/core-feature-adoption-rate-benchmark-report-2024/ - https://productraiser.com/feature-adoption-rate benchmark/#:~:text=In%20Summary:,and%20engagement%20with%20their%20products
- Literature on digital marketplaces often highlights that even small improvements in customer retention (around 5%) can generate significant value; therefore, we defined slightly more conservative validation thresholds (3% for the simplest to achieve and 4% for the hardest) as realistic and achievable targets for our metrics belonging to that category: https://hbr.org/2014/10/the-value-of-keeping-the-right-customers
- Studies on digital products often consider task success rates around 80% as a benchmark for effective task execution; starting from this reference level, we assume that if metrics related to that thematic area exceed roughly 10-12%, the effective task success rate would fall below this threshold; therefore, we define our targets so that these metrics remain over that level: https://uxplanet.org/task-success-rate-essentials-6e7fb30604e2 - https://measuringu.com/completion-rates/

FIRST HYPOTHESIS PROVIDED ON THE RIGHT

Subito Analytics is a paid, professional-only dashboard providing advanced sales data and performance insights for business sellers
It includes structured metrics on listing performance, visibility, conversion, and customer interaction, combined with actionable recommendations

HYPOTESIS #1:
We believe that providing professional sellers with structured performance insights and business-oriented guidance will increase their perceived control and service value, reinforce sustained selling activity over time, and expand adoption of structured subscription the premium services
To verify that, we will introduce a dedicated professional analytics dashboard offering sales data, performance indicators, and actionable recommendations for promotional optimisation
And measure:

- Number of professional sellers subscribing to structured plans for the first time
- Professional plan adoption rate
- Paid visibility adoption rate
- Seller repeat listing rate
- Organic return rate
- Repeat transaction rate

We are right if (within a year):

- Number of professional sellers subscribing to structured plans for the first time increase by at least 2%
- Professional plan adoption rate increases by at least 2%,
- Paid visibility adoption rate increases by at least 3%
- Seller repeat Listing rate increases by at least 3%
- Organic return rate increases by at least 3%
- Repeat transaction rate increases by at least 2%

subito POLIMI GRADUATE SCHOOL OF MANAGEMENT

MODULE #3: TRUST QUICK READER, ENANCHED CHATBOT AND NEW DISCOVERY STRUCTURE

The **Trust Quick Reader** is a free feature for both private users and businesses that reduces cognitive effort by making trust instantly readable
It introduces a Trust Summary Layer that reorganizes existing data (ratings, badges, verification, activity) into a simple reliability index (High/Medium/Low or score), a one-sentence summary, and an expandable detail view It increases perceived safety and confidence

HYPOTESIS #2:

We believe that reducing uncertainty during listing and profile evaluation will strengthen perceived safety and trust among authenticated users, contributing to higher community quality
To verify that, we will implement a Trust Quick Reader summary layer within real listings and profiles, displaying a reliability index, a short summary sentence, and an expandable trust breakdown
And measure:

- Dispute rate
- Reciprocal positive review rate
- Repeat transaction rate

We are right if (within a year):

- Dispute rate decreases by at least 2%
- Reciprocal positive review rate increases by at least 1%
- Repeat transaction rate increases by at least 2%

The **Enhanced Discovery Infrastructure** strengthens the existing infrastructure through two distinct components: the **Intent & Mood Filtering Layer**, which introduces improved intent filters (Gift, Urgent, Best Deal, Green, Secure Shipping) and mood shortcuts ("I want to treat myself", "I need something to distract me", "I'm looking for a new hobby"); and the **Dynamic Base Profiling**, where users select top core interests and one primary role (buyer or seller) at registration, with the profile then dynamically updated based on behavior
This profiling feeds the entire experience in terms of personalized recommendations, while for businesses personalization follows different criteria aligned with professional and commercial objectives

HYPOTESIS #3:

We believe that increasing personalization issues relevance within the marketplace will reduce navigation friction, deepen interaction and reinforce sustained return behaviour over time, due to their perceived usefulness
To verify that, we will implement enhanced intent-based filters and dynamic behavioural profiling within the marketplace, adapting the whole experience on user context and declared interests
And measure:

- Backtracking rate
- Saved search Reactivation rate
- Avg meaningful actions per logged-in session
- Recommendation interaction rate
- Organic return rate

We are right if (within a year) :

- Backtracking rate does not exceed 6%
- Saved search reactivation rate increases by at least 4%
- Avg meaningful actions (research) per session increases by at least 3%
- Recommendation interaction rate increases by at least 3%
- Organic return rate increases by at least 3%

The **Multifunctional Chatbot** extends the existing support chatbot, which currently operates only for assistance requests
It would be available across the platform and helps users navigate the marketplace when they do not know what to search, need guidance, or require support
It combines search guidance, service explanation, and support resolution within a single conversational interface

HYPOTESIS #4:

We believe that introducing a guided conversational entry point will streamline marketplace flows by reducing user unnecessary navigation steps and lowering dependency on human support while strengthening perceived service quality and reinforcing sustained return behaviour after successful experiences
To verify that, we will introduce a conversational AI assistant within the platform capable of guiding search, explaining services, and resolving common support needs
And measure:

- Backtracking rate
- Exceptional support rate
- Seller repeat listing rate
- Buyer repeat purchase rate
- CS post-support rate

We are right if (within a year):

- Backtracking Rate does not exceed 6%
- Exceptional Support Rate does not exceed 5%
- Seller Repeat Listing Rate increases by at least 3%
- Buyer Repeat Purchase Rate increases by at least 3%
- CS post-support rate increases by at least 2%

MODULE #3: SUBITO AI COPILOT

The Negotiation support, free for private users and companies, is an invisible chat assistance that suggests replies, warns about risky words, provides average price hints, and recommends protection options
It supports users during negotiation, making conversations safer, smarter, and more trustworthy without replacing them

HYPOTESIS #5.1:

We believe that reducing ambiguity and hesitation during buyer-seller negotiations will increase the likelihood of transaction closure and encourage more timely and sustained interaction, while strengthening perceived safety within the exchange
To verify that, we will integrate real-time negotiation guidance within the chat, including response suggestions, risky word warnings, average price hints, and protection reminders
And measure:

- Avg meaningful actions (Transaction completion) per logged-in session
- Avg new seller conversations per logged-in buyer per week
- Same-day response rate
- Dispute rate

We are right if (within a year):

- Avg meaningful actions (Transaction completion) per logged-in session increases by at least 3%
- Avg new seller conversations per logged-in buyer per week increases by at least 3%
- Same-day response rate increases by at least 3%
- Dispute rate decreases by at least 2% within a year

The **Smart Suggestions Everywhere** introduces an active, contextual recommendation system that adapts to user behavior and profile type
For private users, suggestions are free while searching, browsing, or reading the Magazine, while promotional recommendations are paid; for businesses, they are all included in the subscription or available as minimal extensions
The system adjusts criteria based on user type and intent, increasing engagement and retention
Recommendations are non-intrusive, using subtle visual highlights

HYPOTESIS #5.2:

We believe that increasing the presence of context-aware action opportunities across the platform will encourage their active use, and through repeated use enhance their perceived usefulness, leading to deeper and more frequent authenticated interactions and greater adoption of premium promotional services
To verify that, we will introduce contextual smart suggestions across search, navigation, and content flows, including promotional upgrade for sellers
And measure:

- Recommendation interaction rate
- Avg meaningful actions (associated to different recommendations) per logged-in session
- Paid visibility adoption rate
- Number of sellers activating paid visibility or premium listing for the first time

We are right if (within a year):

- Recommendation interaction rate increases by at least 3%
- Avg meaningful actions per logged-in session increases by at least 4%
- Paid visibility adoption rate increases by at least 3%
- Number of sellers activating paid visibility or premium listing for the first time increases by at least 3%

The **Listing Optimiser** supports users during ad creation by improving listing quality and effectiveness
For private users, a basic version is free to demonstrate value, while advanced optimization features are paid; for businesses, it is included within the subscription, with optional upgrade extensions
During publication, the tool provides real-time feedback on photo quality, listing completeness, title clarity, price suggestions, and an overall "Ready Score" indicating how optimized the listing is
The system adapts its criteria and recommendation logic based on whether the user is a private seller or a business, ensuring tailored guidance and higher performance outcomes

HYPOTESIS #5.3:

We believe that reducing friction and effort in the listing creation process will increase seller efficiency and confidence, reinforce sustained publishing behaviour over time, and expand adoption of value-added paid services among authenticated users
To verify that, we will implement a guided listing optimisation flow during publication, including photo quality feedback, completeness indicators, title and price suggestions, and a listing readiness score
And measure:

- Listing abandonment rate
- Seller repeat listing rate
- New value-added service adoption rate (listing optimisation)

We are right if (within a year):

- Listing abandonment rate does not exceed the 6%
- Seller repeat listing rate increases by at least 3%
- New value-added service adoption rate increases by at least 5%

MODULE #3: WHEN TO EFFETIVELY TEST? WHEN TO EFFETIVELY BUILD?

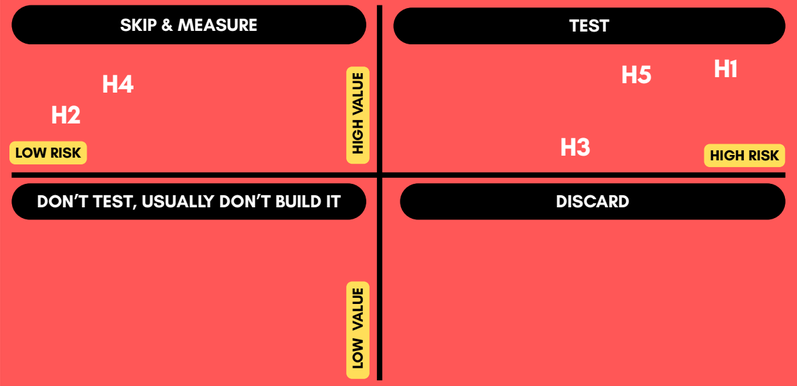
SUBITO ANALYTICS - H1:

Perceived Value: HIGH → professional sellers gain actionable performance insights that increase perceived control, improve selling, and enhance the perceived value of the service; for the platform, this can drive greater adoption of subscription plans and paid visibility services
Risk: HIGH → the hypothesis introduces a completely new environment and assumes that sellers both need these insights and are willing to pay for them; together, these assumptions create high uncertainty and require validation before development

TRUST QUICK READER - H2:

Perceived value: HIGH → trust and safety are core concerns for all users; this feature would make existing trust signals instantly readable, reducing cognitive effort and increasing confidence during evaluation, while strengthening the platform's perceived reliability and quality
Risk: LOW → the feature reorganises existing information without changing/make more complex user behaviour or core platform flows, therefore the implementation risk and adoption uncertainty are relatively low

HYPOTESIS PRIROTIZATION CANVAS



ENANCHED DISCOVERY INFRASTRUCTURE - H3:

Perceived Value: HIGH → Intent-based filters and dynamic profiling increase result relevance, reducing navigation friction for users while driving deeper interaction and sustained return behaviour for the platform
Risk: HIGH → the hypothesis introduces a substantial change in how users explore the marketplace and interact with search and recommendations, potentially modifying established navigation habits, so its effectiveness depends on real behavioural adoption and requires validation through testing

MULTIFUNCTIONAL CHATBOT - H4:

Perceived Value: HIGH → by guiding users when they do not know what to search or need support, the conversational assistant can streamline marketplace flows for them, while strengthening perceived service quality and return behavior for the platform
Risk: LOW → chatbot interaction is already familiar to users within the platform through customer support, so extending it to guided discovery and service explanation requires limited behavioural change and presents relatively low adoption risk

SUBITO AI COPILOT - H5:

Perceived Value: HIGH → all three solutions aim to reduce friction and ambiguity across key stages of the marketplace journey, improving interaction quality, user confidence, and the likelihood of successful transactions; while increasing engagement for the platform
Risk: HIGH → although each feature addresses a specific moment of the journey, all of them introduce new interaction mechanisms that modify established user behaviours
Their effectiveness therefore depends on real user adoption and behavioural response, which requires validation through experimentation

MODULE #3: MVPS & ASSOCIATED TESTS

Based on the results of the **Hypothesis Prioritization Canvas Framework** applied to our set of hypotheses, **three out of five** fall into the high-value/high-risk quadrant (**TEST**) and therefore require experimental validation through MVPs and associated tests (note 1: hypothesis #5 includes multiple features, so separate tests are designed to evaluate each component; note 2: all proposed tests come from the application of the **AFTER Framework** to identify the right one for each case); the remaining ones fall into the **SKIP & MEASURE** quadrant and can be directly implemented and monitored; no discarded hypotesis

SUBITO ANALYTICS

MVP: LANDING PAGE

A simple landing page presenting the concept of Subito Analytics, its main features and value for professional sellers
The page includes a clear call to action to join the waiting list or request early access, allowing measurement of real interest and potential willingness to pay

PROPOSED TEST: SMOKE TEST + USER INTERVIEWS

To validate real interest and willingness to adopt a professional analytics dashboard before investing in product development (a separated app)

ENANCHED DISCOVERY INFRASTRUCTURE

MVP: WEB PAGE

Improved filters and dynamic profiling even if minimal or in simplified sets must operate within the real search and ranking system, as we need to measure actual behavioural impact on navigation efficiency, engagement, and retention

PROPOSED TEST: A/B/N TEST

An A/B/n test allows comparison between multiple configurations of filtering and profiling mechanisms, enabling precise measurement of their impact on navigation efficiency, engagement, and retention

NEGOTIATION SUPPORT

PROPOSED MVP —>WEB PAGE

The Negotiation Support even in a simplified version, it must function, because only real interaction within live conversations allows us to measure its impact

PROPOSED TEST —> BETA TEST

A Beta test allows the feature to be deployed to a limited group of real users in live conversations, enabling observation of behavioural adoption

SMART SUGGESTIONS EVERYWHERE

PROPOSED MVP: WEB PAGE

A simplified contextual recommendation layer is integrated within the real flows to observe actual interaction and their behavioural impact
Some advanced recommendation capabilities are displayed through a locked premium section to signal potential additional value

PROPOSED TEST: A/B TEST + SMOKE TEST

An A/B test compares the standard experience with the contextual recommendation layer to measure its impact on user interaction, exploration behaviour and engagement
At the same time, the presence of locked premium features functions as a smoke test to measure real interest in advanced recommendation capabilities before full development

LISTING OPTIMIZER

PROPOSED MVP: WEB PAGE

A simplified version of the listing optimisation flow is implemented directly within the real listing creation interface to observe behavioural impact
Some advanced optimisation features are displayed but locked

PROPOSED TEST: EARLY ADOPTERS + SMOKE TEST

Selected active sellers receive early access to the optimisation flow to observe real behavioural impact on listing completion and repeat publishing before wider release
At the same time, the presence of locked premium optimisation features acts as a smoke test to evaluate real interest and willingness to upgrade before fully developing advanced capabilities

MODULE #4: VALIDATING LOGGED-IN DAU AS SUBITO'S NORTH STAR METRIC

Logged-in Daily Active Users represent the number of unique users who log into the platform and perform at least one tracked interaction within a 24 hour period

In our case, Logged-in DAU refers specifically to authenticated users who generate at least one measurable action per day, such as searching, viewing listings, chatting, saving items, or publishing a listing

A metric qualifies as a **North Star Metric** when it **supports revenue generation**, **captures customer value**, and **measures progress over time → in our case:**

DOES IT BRING REVENUE? YES

- Data as Strategic Asset: more Logged-in DAU generates richer behavioural data, enabling new value-added services and monetisation opportunities
- Trust & Retention Loop: higher authenticated usage improves personalisation, trust and habit formation, increasing adoption of paid services
- Advertising Attractiveness: a larger, more active logged-in community enhances platform appeal for third-party advertisers
- Data Commercialisation Potential: structured, high-quality datasets create additional long-term revenue diversification opportunities

DOES IT REFLECTS CUSTOMER VALUE? YES

- If users log in regularly and engage in authenticated interactions, it indicates: perceived trust, platform reliability, habit formation, alignment with user needs and sustained logged-in activity reflects the platform's ability to deliver recurring value, rather than occasional visits
- Therefore, Logged-in DAU directly measures the level of engagement and habitual usage

DOES IT MEASURE PROGRESS? YES

- Logged-in DAU is: quantifiable, trackable daily, comparable over time and sensitive to improvements
- As product improvements are implemented, variations in Logged-in DAU reflect whether strategic priorities are effectively translating into user behaviour
- Therefore, it functions as a measurable indicator of strategic execution

WHEN DOES A NORTH STAR METRIC MAKE SENSE?

- Defining a North Star Metric is most meaningful when product usage directly drives growth, or when user value strongly aligns with business value, or when the company operates in a scaling or high-growth phase
- In Subito's case, it is particularly coherent because user value and business value are structurally aligned
- As service quality improves through a self-reinforcing data advantage, the community becomes stronger and more reliable, generating more authenticated interactions that simultaneously enhance user experience and reinforce Subito's long-term competitive leadership

- The reasoning used to demonstrate why Logged-in DAU qualifies as a North Star Metric directly reflects all Product Objectives and aligns with the Business Objectives
- **By satisfying the theoretical criteria of a North Star Metric and directly contributing to both product-level and business-level objectives, logged-in DAU we established a clear and coherent link between product strategy, product goals and long-term business goals**

- Looking at a broader picture, Subito already operates at massive scale in terms of searches, visits, listings and daily activity (2.8 billion searches, +4.35% vs LY; over 1.7 billion visits, +5.5% vs LY, DAU over 2.6 million, +5.7% vs LY; nearly 52 million listings on the platform, with 141,500 new listings added every day; over 7 million app downloads; more than 26 million MAU, etc.)
- **The next evidence of success will not simply be more traffic considered as an isolated indicator**: while these numbers are undeniably impressive, sustainable growth does not depend on volume alone
- **What truly matters is increasing authenticated, logged-in usage, which transforms anonymous visitors into traceable and valuable interactions' generators, creating benefits not only for the company, but also for users themselves whose finally will achieve their aspirations**

MODULE #4: THE HEART FRAMEWORK & INPUT METRICS AND THE HEALT METRICS

We selected the **HEART framework** because it is particularly suited for product area's cases focused on engagement, usability and retention
In our case, these dimensions are strictly linked to the growth of Logged-in DAU, as improvements in engagement depth, task efficiency and retention directly sustain authenticated usage and vice versa in a virtuous cycle
HEART provides the most coherent structure to identify the **input metrics** that, when improved, directly translate into growth in our North Star Metric, demonstrating that our data-driven value loop is working

DIMENSION	GOALS	SIGNALS
HAPPINESS	Strengthening trust, perceived safety, service quality and sense of community among authenticated users	Logged-in users: leave reciprocal reviews after successful transactions, complete transactions without disputes during negotiations, repeatedly complete transactions within the platform and rate customer service positively after support interactions
ENGAGEMENT	Increasing depth and frequency of meaningful authenticated interactions	Logged-in users: perform multiple searches within the same session, save or favourite multiple listings daily, initiate conversations with multiple new sellers weekly, actively respond to ongoing negotiations within the same day and engage with personalised recommendations during multiple sessions
ADOPTION	Expanding adoption of login-dependent, premium services and new added services	Logged-in users: (sellers) activate paid visibility or premium listing enhancements for the first time, (buyers) complete a transaction using integrated protection or shipping services for the first time, (professional sellers) subscribe to structured shop plans for the first time and (users in general) activate newly introduced value-added services after their launch
RETENTION	Building and reinforcing long-term habit formation and sustained authenticated return behaviour over time	Logged-in users: return shortly after their first interaction, repeatedly refine or reactivate saved searches across different time periods, (sellers) publish new listings after completing previous sales, (buyers) return to complete additional purchases after prior transactions and (users in general) reopen the app spontaneously, without external prompts
TASK SUCCESS	Reducing friction in core marketplace flows to preserve usability, sustain effortless usage and lower time to complete a deal	Logged-in users: complete listing creation without interruption, complete payment and shipping flows without abandoning the process, resolve doubts through in-app self-guidance tools, send requests primarily related to exceptional cases only and navigate core flows without repeated retries or backtracking

METRICS ARE PROVIDED IN THE NEXT PAGE

METRICS → THESE WILL BE PART OF OUR SET OF INPUT METRICS

H: Higher user happiness → continued transactions within authenticated flows → growth in Logged-in DAU
Dispute rate (DR) = Number of transactions with at least one dispute /Total completed transactions
Reciprocal positive review rate (RPR) = Transactions with reciprocal reviews >= 4 stars/Total completed transactions
CS post-support rate (CSPSR) = Number of support ratings >= 4 by logged- in users /Total support ratings
Repeat transaction rate (RTR) = Number of logged-in users with >= 2 completed transactions/total logged-in users with >= 1 transaction

E: More meaningful logged-in sessions → login perceived as valuable → users remain authenticated → growth in Logged-in DAU
Avg meaningful actions per logged-in session (**AVGMAXLIS**) = Total meaningful actions per logged-in session/#logged-in sessions
Avg new seller conversations per logged-in buyer (**AVGNSCXLIB**) = Total new logged-in seller conversations opened/Total logged-in buyer (weekly update)
Same-day response rate (**SDRR**) = Same-day logged-in seller responses/Total logged-in buyer started conversations
Recommendation interaction rate (**RIR**) = Number of interactions with recommendations by logged-in users/Number of recommendation shown to logged-in users

A: Valuable premium or value-added services in logged-in sessions → authentication becomes necessary → sustained authenticated usage → growth in Logged-in DAU
Number of **sellers activating paid visibility or premium listing for the first time (#UAPVPL1T)**
Paid visibility adoption rate (**PVAR**) = Active sellers using paid visibility in period/Total active sellers
Number of **transactions using integrated protection for the first time (#TUIP1T)**
Protection adoption rate (PAR) = Transactions using integrated protection/Total completed transactions
Number of **professional sellers subscribing to structured plans for the first time (#PSSSP1T)**
Professional plan adoption rate (**PPAR**) = Professional sellers on structured plans/Total logged-in professional sellers
New value-added service adoption rate (**NVASAR**) = Users activating new value-added service/Total logged-in users

R: Consistent logged-in user return after interactions → login becomes routine → sustained authenticated usage → growth in Logged-in DAU
New user retention rate (**NURR**) = New users active again/Total new users (weekly update)
Saved search reactivation rate (SSRR) = Users reactivating saved searches/Users with saved searches (weekly update)
Seller repeat listing rate (**SRLR**) = Sellers publishing a new listing/ Sellers completing at least one sale
Buyer repeat purchase rate (BRPR) = Buyers completing >= 2 purchases/Buyers completing at least one purchase
Organic return rate (**ORR**)= Sessions without trigger/Total sessions

T: Lower friction in authenticated flows → smoother authenticated flows → higher sustained logged-in usage → growth in Logged-in DAU
Listing abandonment rate (LAR) = Uncompleted listing creations/Listing creation attempts
Payment completion rate (PCR) = Completed payments op/ payments op/ attempts
Guidance tools usage rate (**GTUR**) = Users interacting with guidance tools/Total logged-in users
Exceptional support rate (**ESR**) = Support requests classified as exceptional/Total support requests
Backtracking rate (BR) = Sessions with repeated navigation steps/Total sessions

HEALTH METRICS

Health metrics are guardrail indicators used to ensure that growth in the North Star Metric does not negatively impact other crucial dimensions

In our case, these metrics relate to reputation, competitive position and economic sustainability, which represent fundamental pillars of our overall strategic objectives

- **Market share** = Subito Revenue/Total Italian re-commerce Revenue
- **Relative market share** = Subito Revenue/Revenue of Largest Competitor
- **Fraud rate** = Fraudulent transactions/Total transactions
- **External reputation signals** (e.g. Trustpilot score trend) monitored qualitatively
- **Login-dependent revenue share** = Revenue from login-dependent paid services/Total revenue
- **New value-added revenue share** = Revenue from newly introduced paid services / Total revenue

These are only examples that can be took into consideration

NOTE

Unless otherwise specified, all metrics are calculated and monitored on a 30-day basis

Unless otherwise specified, metrics are calculated considering logged-in users only

Monthly monitoring allows us to track the direction of the metrics over time, while the target improvement refers to the overall change achieved within one year

Improvements will be expressed as relative changes compared to the baseline value, regardless of whether the metric is a rate or an absolute count

subito POLIMI GRADUATE SCHOOL OF MANAGEMENT

MODULE #4: THE NORTH STAR TREE

L1

LOGGED-IN DAILY ACTIVE USERS

L2

DAILY LOGGED-IN USERS
DAILY ACTIVE USERS (DAU)
LOGIN CONVERSION RATE = SESSIONS WITH LOGIN / ANONYMOUS SESSIONS

L3

DR↓ - PRP - RTR - CSPSC - SDRR
AVGMAXLIS (transaction completion) - AVGMAXLIS (associated to different recommendations) - AVGMAXLIS (research) - RIR - AVGNSCXLIB
PVAR - #PSSSP1T - PPAR - #UAPVPL1T - NVASAR
SSRR - SRLR - BRPR - ORR
BR≤↓ - LAR↓ ≤ - ESR ≤

L4

#TUIP1T - PAR
NURR
PCR≤ - GTUR≤

NOTE 1

Compared to their own previous measurements, all indicators are expected to increase unless a downward arrow is shown
A positive effect on the NSM is in fact generally associated with an increase compared to the previous measurement of the specific input metric; when a downward arrow is shown, however, that decrease still represents a positive effect on the NSM
Metrics derived from task success must also remain below specific thresholds to generate a positive effect on the NSM
Improvements will be expressed as relative changes compared to the baseline value, regardless of whether the metric is a rate or an absolute count

NOTE 2

The choice of L2 metrics is coherent with the overall metric structure: **since our North Star Metric is Logged-in DAU, the selected L2 metrics reflect the behavioural dynamics that contribute most directly to its growth, namely users' propensity to log in (log-in perceived more useful) and the activity level of logged-in users over time, which together activate positive effects on the NSM**
Metrics in L2 are still monitored monthly to track their evolution over time, while target improvements still refer to the overall change expected within one year, like the ones in L3 and L4
Improvements are expressed as increases compared to the baseline value, regardless of whether the metric is a rate or an absolute count

NOTE 3

As L2 metrics are directly influenced by the improvements in L3 and L4, where annual improvements of approximately 4-5% vs baseline are expected, **it is reasonable to assume that L2 metrics may experience a similar magnitude of improvement vs baseline over the same time horizon (alternatively a 5-6% if we consider a longer time of 18 months)**
Some evidences: the reasonings performed for DAU is also coherent with the most recent available data, which indicate a 5,7% increase compared to the previous year

Improvements in the input metrics are expected to progressively translate into behavioural changes that increase logged-in platform active usage
As the input metrics are expected to improve annually by approximately 4-5%, their combined effect is expected to generate a plausible 6-7% increase in the North Star Metric over 12-18 months

The strategy would therefore be considered successful if the North Star Metric (Logged-in Daily Active Users) increases by at least 6-7% compared to the baseline, within the precited strategic horizon

Moreover, success will be assessed also ensuring that core health indicators such as revenue sustainability, marketplace leadership and trust remain stable or improve

MODULE #5: ASSUMPTIONS AND STRUCTURING LOGIC UNDER THE ROADMAP

As external analysts, we do not have access to internal information regarding team structure, development capacity, resource allocation, or existing delivery plans

Therefore, the roadmap that will be later shown should be interpreted as a **proposed integration of the iniatives/epics emerging from our strategic analysis**, placed within a broader set of activities that Subito is presumably already carrying out (not specified here for simplicity); these activities can only be partially inferred from publicly available information such as company communications, articles, and platform updates

To structure the roadmap coherently, the proposed actions have been organised across three levels:

- **Themes** (dictate the direction of the roadmap and should always link to the business objectives)
- **Initiatives** (large derivableare worked on by the team to achieve the business objectives, linked to the strategic themes)
- **Epics** (essentially product backlogs; broken down deliverables or features that, when combined, deliver an initiative)

The initiatives/epics are assigned to specific themes to structure the roadmap easily, although in practice, many epics simultaneously impact multiple strategic dimensions of the platform

Epics are defined at the lowest level where a meaningful product deliverable emerges, as further decomposition would only result in isolated technical modules that do not generate standalone value

Strengthening **users' propensity to engage while logged in** and **reducing anonymous usage** represents the central strategic lever identified in our analysis; all initiatives are therefore designed to support this objective, **enabling richer behavioural data collection** and **progressively making the value of login more evident to users**, continuously enhancing service quality and ultimately reinforcing Subito's leadership

THEME	INITIATIVES	EPICS
Trust and safety	Improve transparency through automated summaries	TRUST QUICK READER
Personalised and high-quality experience	Enhance personalization relevance to make the service feel increasingly relevant and tailored to each user, while improving perceived quality	ENHANCED DISCOVERY INFRASTRUCTURE (Intent/Mood Filtering Layer + Dynamic Base Profiling)
Engagement, habit formation and community retention	Increase retention and habit formation through contextual, constantly updated, useful recommendations Improve negotiation efficiency and effectiveness to strengthen engaging interactions within the community	SMART SUGGESTIONS EVERYWHERE NEGOTIATION SUPPORT
Frictionless and simple transactions	Improve listing ease of completion of high quality listings Streamline user flows by reducing unnecessary navigation steps and lowering dependency on human support	LISTING OPTIMIZER MULTIFUNCTIONAL CHATBOT
Value-added services and monetisation	Enable professional sellers with advanced marketplace analytics	SUBITO ANALYTICS

MODULE #5: RICE PRIORITISATION FRAMEWORK

To prioritise the proposed epics, we apply the **RICE framework**; this method combines quantitative objective scoring with structured qualitative assumptions across multiple dimensions used to assign the different scores, allowing initiatives to be compared balancing consistently different strategic factors

Theoretically, these initiative needs to be prioritized in between a broader set of activities that Subito is presumably already carrying out (not specified here for simplicity)

REACH SCALE
5 = **81-100%** users impacted
4 = **61-80%** users impacted
3 = **41-60%** users impacted
2 = **21-40%** users impacted
1 = **0-20%** users impacted

IMPACT SCALE
3 = Massive
2 = High
1 = Medium
0,5 = Low
0,25 = Minimal

CONFIDENCE SCALE
5 = **81-100%** - Very high confidence
4 = **61-80%** - High confidence
3 = **41-60%** - Medium confidence
2 = **21-40%** - Low confidence
1 = **0-20%** - Very low confidence

EFFORT SCALE
1 = 1-2 sprints
2 = about 1 month
3 = about 2 months
4 = about a 1 quarter
5 = more than 1 quarter

Due to the lack of actual usage and operational detailed data, **REACH** and **EFFORT** are estimated through simplified ordinal scales and/or ranges, **IMPACT** is modeled as a non-linear multiplier to reflect the different magnitude of effect initiatives may have on the North Star Metric, while **CONFIDENCE** is expressed through ranges associated to a linear scale rather than precise values, given the limited evidence available to support exact estimates

Epic	Reach	Impact	Confidence	Effort	RICE Score	Rank
Trust Quick Reader	5	1	5	1	**25**	**1°**
Enhanced Discovery Infrastructure	3	2	3	3	**6**	**5°**
Multifunctional Chatbot	3	1	4	2	**6**	**4°**
Smart Suggestions Everywhere	4	0,5	3	4	**1,50**	**7°**
Negotiation Support	5	2	4	3	**13,33**	**2°**
Listing Optimizer	4	2	3	2	**12**	**3°**
Subito Analytics	2	3	2	5	**2,4**	**6°**

- **Trust Quick Reader:** Very high reach thanks to its extremely simple, universal usability (every user owns it freely) and effective utility easily perceptible; impact on NSM is moderate as it only enhances already existing trust and safety mechanisms; confidence is very high due to the clear resonance with customer gains, while extremely low ieffort is required due to its ease of technical implementation
- **Negotiation Support:** Very high reach as the feature is automatically available to all logged-in users during negotiations and utility is clear immediately; impact is high on the NSM as it strengthens safer interactions, negotiation efficiency and trust (core values); confidence is medium due to the novelty of the feature, while effort is moderate because compliance requirements are usually a bit hard to implement
- **Listing Optimizer:** Reach is medium as some advanced optimisation features may be paid, while basic ones remain available to all users; impact on the NSM is high since better listing quality can improve directly selling performance and reinforces the value of authenticated usage; confidence is moderate due to the novelty of the feature, while effort remains relatively low as several optimisation components are plug-and-play
- **Multifunctional Chatbot:** Reach is moderate as users need to actively interact with the feature to benefit from it; impact on the NSM is moderate since it mainly enhances an already existing support chatbot; confidence remains relatively high as users are familiar with chatbot interactions, while effort is moderate because plug-and-play solutions exist for this case but require integration with platform data and systems
- **Enhanced Discovery Infrastructure:** Reach is moderate as users must repeatedly interact with the feature to benefit from it, even though it is freely available; impact on the NSM is high since stronger personalization improves perceived service quality and encourages logged-in usage; confidence is moderate as it significantly changes the user experience, while effort is high due to multiple complex technical implementations
- **Subito Analytics:** Reach is low as the feature targets only professional sellers and requires payment; impact on the NSM is very high since advanced analytics can significantly improve selling efficiency (log-in is perceived very useful); confidence is relatively low due to the introduction of a new product experience requiring validation, while effort is very high as it requires building a dedicated app
- **Smart Sugegstions Everywhere:** Reach is high as suggestions appear across many platform touchpoints, although the most useful options may require payment; impact on the NSM is low since recommendations can be easily ignored and are already common; confidence is moderate as the feature may be perceived as intrusive, while effort is relatively high because several different modules must be developed

MODULE #5: ROADMAP DEFINITION - PART 1

	Q1	Q2	Q3	Q4
TRUST AND SAFETY	Improve transparency through a new **TRUST QUICK READER**	Other subito's already existing activities that deals with customer satisfaction first (eg. fraud and scam checking, controls on ratings and review mechanisms, etc.)		
	Decrease disputes in transaction rate (1)	Increase reciprocal positive feedbacks rate (2)	Increase repeated transactions rate (3)	
PERSONALISED AND HIGH-QUALITY EXPERIENCE	Already existing activities that deals with customer percieved service quality enhancement (eg. keep monitoring the quality of the CHC, proposing good contents on the magazine, in-app learning tools enhancements, etc.)		Enhance personalization relevance to make the service feel tailored to each user through the new **ENHANCED DISCOVERY STRUCTURE**	Already existing activities that deals with customer percieved service quality enhancement
			Increase saved search reactivations rate (4)	Increase AVG searchs per session rate (5)
ENGAGEMENT, HABIT FORMATION AND COMMUNITY RETENTION	Improve negotiation efficiency and effectiveness through the new **NEGOTIATION SUPPORT COPILOT**, while increasing engagement in interactions	Already existing activities that deals with community engagement and retention dynamics (eg. regularly updated chat guidelines)		Increase retention and habit formation through **SMART** contextual, constantly updated, useful **SUGGESTIONS**
	Increase same day response rate (6)	Increase AVG transaction per seller rate (7)	Increase organic return without triggers (8)	Increase recommendation interaction rate (9)
FRICTIONLESS AND SIMPLE TRANSACTIONS	Already existing activities that deals with making transactions as frictionless and simple as possible for customers (eg. Tutto Subito usability and performance enhancements, guided flows, etc.)	Improve listing ease of completion of high quality listings throught the new **LISTING OPTIMIZER COPILOT**	Streamline user flows by reducing unnecessary navigation steps and lower dependency on human support throught the new **MULTIFUNCTIONAL CHATBOT**	
		Keep listing abandonment rate under the threshold/Increase repeated listings and avg listings per session rates (10)	Increase CS post-support rate Keep guidance tools usage rate, support tools usage only for exceptional case rate and backtracing rate under the threshold (11)	
VALUE-ADDED SERVICES ACTIVATION AND MONETISATION	Already existing activities that deals with value-add paid services (eg. VendiloSUBITO, subito LOCAL, MULTIGESTIONALE, etc.)			Enable professional sellers with advanced **SUBITO ANALYTICS**
	Increase paid visibility tools adoption rate (12)			Increase professional plan adoption rate (13)
	Increase value-added service adoption rate (already existing) (14)			Increase new value-added service adoption rate (15)

(16) (17)

subito POLIMI GRADUATE SCHOOL OF MANAGEMENT

MODULE #5: ROADMAP DEFINITION - PART 2

MILESTONE	VALUE AMIED TO BE ACHIEVED
1	+0,5% (IN 1 QUARTER)
2	+0,25% (IN 1 QUARTER)
3	+0,5% (IN 1 QUARTER)
4	+1% (IN 1 QUARTER)
5	near +1% (IN 1 QUARTER)
6	near +1% (IN 1 QUARTER)
7	near +1% (IN 1 QUARTER)
8	near +1% (IN 1 QUARTER)
9	near +1% (IN 1 QUARTER)
10	under 6% (and decreased vs. baseline) // near + 1% //+1% (IN 1 QUARTER)
11	+ 1% // under 5% // under 6% (and increased vs. baseline) // under 10% (and decreased vs. baseline) (IN 1 QUARTER)
12	near +1% (IN 1 QUARTER)
13	+0,5% (IN 1 QUARTER)
14	+1,5% (IN 1 QUARTER)
15	+1,5% (IN 1 QUARTER)
16	+ 2 -2,5 % (IN 2 QUARTERS - ALL CORE METRICS)
17	+ 4 - 5 % (IN 2 QUARTERS - L2 METRICS) **+ 4 - 5 % (NSM)**

METHODOLOGICAL NOTES

For clarity reasons, the milestone values associated with the roadmap **were not displayed directly in the previous slide and are therefore summarised in the table reported here**

Milestones represent **expected incremental improvements in the key metrics identified for each quarter, based on the initiatives prioritised in the roadmap**

All previously defined metrics **continue to be monitored throughout the entire year (30 days misurations and 1 year misurations are still valid), as improvements in the product system are cumulative and interconnected**

The expected values reported in the table should therefore be interpreted as the **primary contribution of each activity to the related metric within the considered quarter**

Milestones 16 and 17 are associated with the improvement of the core metrics (Logged-in DAU, Conversion Rate, Daily Logged Users and DAU)
They represent the expected contribution of the planned initiatives to these metrics over a two-quarter timeframe and help illustrate how the concrete initiatives included in the roadmap contribute to the evolution of these core indicators too
Overall targets are instead evaluated on a yearly basis, as previously stated

Finally, the existing Subito activities reported in the roadmap **are included only for illustrative purposes and represent a non-exhaustive subset of the initiatives currently running on the platform**

CLOSING - WHAT YOU'D DO NEXT + BIBLIOGRAPHY

KEY UNKNOWNS

Attributing some metrics to a single HEART category was challenging, as all the dimensions are strongly interconnected in platform environments like the one of Subito
In addition, selecting a limited but meaningful set of metrics required several interpretative choices

As a result, some uncertainty remains regarding whether the selected metrics and their causal links fully capture the mechanisms that drive our North Star Metric

If the selected metrics do not fully capture the drivers of NSM growth, the effectiveness of the proposed plan might not be measured with complete accuracy, meaning that the measurement framework on which the plan relies might not be fully robust

Nevertheless, the selected framework still provides a structured and reasonable approximation to analyse and guide the proposed strategy and the associated initiatives

RISKS TO EVALUATE FURTHER

THRESHOLD RELIABILITY

Defining success thresholds required selecting appropriate benchmarks among a large number of available statistics and industry indicators
However, exact correspondences with our specific context were not always available, requiring additional interpretative reasoning
As a result, some thresholds may not perfectly reflect realistic performance expectations

IMPLICATIONS FOR TESTING AND VALIDATION PHASES

- Test results could be misinterpreted if tests were actually conducted
- Promising hypotheses might appear overly ambitious and be prematurely abandoned, even though more appropriate thresholds could have revealed their real potential once implemented
- Other hypotheses might appear too easily validated, leading to an overestimation of their actual impact and potentially failing to deliver the expected value for users and the business

In both cases, the reliability of the evaluation process could be partially compromised

IMPLICATIONS ON ROADMAP PRIORITIZATION AND DEFINITION PHASES

This may also have influenced how initiatives were prioritised within the proposed operational roadmap, **potentially affecting the order in which activities were planned**

OPEN QUESTIONS

These are questions that can only be answered through the real implementation of the proposed plan and the observation of actual market behaviour

REAL USER ADOPTION

Will users actually adopt and regularly use the proposed features and initiatives? Could some of them evolve into core features of the platform over time?

BUSINESS MODEL IMPACT

To what extent could this plan influence the platform's business model and overall value generation?
Will the proposed plan effectively activate the value chain identified: **More logged-in engagement → richer data → better quality and safer experience → higher user confidence → stronger retention → stronger community → reinforced competitive leadership**?

Only real world execution will reveal whether the plan is truly effective in **supporting and reinforcing Subito's strategic direction and generating value for both users and the business**

These reasonings are needed to clarify the level of **ambiguity** and the **areas to be eventually improved** in the proposed plan
